

CommuniVax

A Coalition to Strengthen the Community's Role
in an Equitable COVID-19 Vaccination Campaign

Transcript from July 15, 2021: Carrying Equity in COVID-19 Vaccination Forward: Guidance Informed by Communities of Color

1

00:02:13.290 --> 00:02:23.340

Prarthana Vasudevan: Welcome to today's webinar carrying equity and covert 19 vaccination forward guidance informed by communities of color Emily brunson will now begin.

2

00:02:27.150 --> 00:02:35.220

Emily Brunson: Thank you everyone for joining us today, my name is Emily brunson and i'm an associate professor of anthropology at Texas State University.

3

00:02:35.910 --> 00:02:42.060

Emily Brunson: i'm joined by my colleague, Dr Monica shock spawn a senior scholar at the Johns Hopkins Center for health security.

4

00:02:42.780 --> 00:02:51.420

Emily Brunson: This webinar is an output of commune of X and national coalition to strengthen the communities role in an equitable koba 19 vaccination campaign.

5

00:02:52.320 --> 00:03:01.590

Emily Brunson: Community box is co led by the Department of anthropology at Texas State University and the Johns Hopkins Center for health security at the Bloomberg school of public health.

6

00:03:02.430 --> 00:03:11.040

Emily Brunson: The Community X coalition which includes local teams, working with black and Hispanic Latino communities across the United States.

7

00:03:11.400 --> 00:03:24.360

Emily Brunson: The working group on equity and coven 19 vaccination and strategic partners, including the Association for immunisation managers was funded by the chance occur Berg initiative with additional support from the Rockefeller foundation.

8

00:03:25.380 --> 00:03:36.630

Emily Brunson: Today we're very excited to share with you the newest commune of X report carrying equity and covert 19 vaccination forward guidance informed by communities of color which was released yesterday.

9

00:03:37.620 --> 00:03:47.700

Emily Brunson: This report outlines new strategies for the coven 19 vaccination campaign that were informed by rapid ethnographic research conducted with black and Hispanic Latino communities.

10

00:03:48.060 --> 00:03:58.500

Emily Brunson: In Alabama California Idaho Maryland and Virginia, it provides specific guidance on how to adapt coven 19 vaccination efforts to achieve greater vaccine coverage.

11

00:03:58.890 --> 00:04:05.790

Emily Brunson: In underserved populations and through this to develop sustainable locally appropriate mechanisms to advance equity and help.

12

00:04:07.230 --> 00:04:17.730

Emily Brunson: today's webinar based on this report will be split into two parts, in the first hour we'll be discussing cross cutting nationally relevant findings derived from the research of our local teams.

13

00:04:18.480 --> 00:04:27.540

Emily Brunson: As part of this will hear from representatives of each of these teams about how the pandemic and covered 19 vaccination has unfolded and played out in their communities.

14

00:04:28.320 --> 00:04:36.720

Emily Brunson: In the second hour, which will be moderated by Monica we will hear from members of the National working group about recommendations drawn from the local observations.

15

00:04:37.320 --> 00:04:46.710

Emily Brunson: As a note, before we begin, we will answer questions from the audience after each panel, if you have a question Please submit it in the Q amp a box i'll now begin.

16

00:05:01.200 --> 00:05:10.590

Emily Brunson: The first observation from the local research is that naming vaccine hesitancy as the reason for low vaccine coverage obscures the more complex reality.

17

00:05:11.460 --> 00:05:17.970

Emily Brunson: First hesitancy involves a range of concerns that can vary in detail and intensity from person to person.

18

00:05:18.750 --> 00:05:32.820

Emily Brunson: For some individuals these concerns are centered on covered 19 vaccines for others, they focus on itself and for some hesitancy stems from a long standing just trust of medicine, public health and our government.

19

00:05:34.230 --> 00:05:48.360

Emily Brunson: Second, focusing myopically on hesitancy can obscure issues of access, including a lack of access to transportation and limited hours of vaccination states that are still preventing people in the United States from being vaccinated.

20

00:05:49.740 --> 00:06:00.390

Emily Brunson: Finally, while it might be easy to envision a straightforward decision making process where an individual alone digest as educational materials and then moves to X X.

21

00:06:00.750 --> 00:06:11.220

Emily Brunson: The reality is that decision making about Cobra 19 vaccination is messy, it is a social process that often prioritises social networks over authoritative sources.

22

00:06:11.700 --> 00:06:16.320

Emily Brunson: It is not a linear process people cycle through information and can change their minds.

23

00:06:16.800 --> 00:06:28.410

Emily Brunson: And it is ongoing some individuals who've already been vaccinated, for example, are still reconsidering their decision and that in turn is impacting the thoughts and decisions of the people around them.

24

00:06:29.880 --> 00:06:38.550

Emily Brunson: In relation to this observation, we will hear from Dr Noah Crespo an associate professor of health promotion and behavioral science at San Diego State University.

25

00:06:39.060 --> 00:06:56.220

Emily Brunson: He is the KPI for our California team following no way we'll hear from Dr Daniela Rodriguez Daniela is an associate scientist of international health at the Johns Hopkins Bloomberg School of Public Health she is a member of the Maryland baltimore team no way over to you.

26

00:06:58.470 --> 00:07:05.670

Noe Crespo: Thank you, Dr Robinson when was the yes good morning everyone by now, we are all familiar with the term vaccine hesitancy.

27

00:07:06.120 --> 00:07:12.690

Noe Crespo: However, to blame lower vaccination rates in communities of color on vaccine hesitancy is incorrect, for several reasons.

28

00:07:13.140 --> 00:07:17.940

Noe Crespo: First, it ignores the fact that many folks in hard hit communities are not hesitant at all.

29

00:07:18.510 --> 00:07:30.120

Noe Crespo: in San Diego South region, for example, which is majority Latino vaccine uptake is remarkably high about 85% of eligible residents in this region have received at least one dose second.

30

00:07:31.020 --> 00:07:35.160

Noe Crespo: hesitancy label overlooks persistent barriers to access and lumps together.

31

00:07:35.820 --> 00:07:47.820

Noe Crespo: The many reasons, people have for not getting vaccinated and it places the responsibility on the individual this can divert attention away from social and structural factors that contribute to lower vaccination next slide.

32

00:07:50.820 --> 00:07:57.510

Noe Crespo: Other traditional barriers to vaccination have been identified, we found a wider set of reasons that go beyond traditional hesitancy.

33

00:07:58.290 --> 00:08:02.220

Noe Crespo: Some participants said that the new healthcare workers who did not believe in vaccinations.

34

00:08:02.820 --> 00:08:10.980

Noe Crespo: This can help doubt downstream effects, since those providers may not model or encourage vaccination went on duty or two people who they know personally.

35

00:08:11.670 --> 00:08:27.360

Noe Crespo: One participant was worried about the possibility of financial implications if something went wrong after vaccination another participant was afraid of the vaccine side effects and advocacy she said i'm a diabetic i'm not healthy, what if I get the vaccine and it makes me worse.

36

00:08:28.440 --> 00:08:40.500

Noe Crespo: We also heard from undocumented individuals who feared, of being perceived as a public charge these individuals avoid any interactions with the health care system for fear that using public services may cause issues further.

37

00:08:41.220 --> 00:08:49.620

Noe Crespo: down the line, other participants said that they had no one to care for their children or cannot take time off of work if they were to experience vaccine side effects.

38

00:08:50.070 --> 00:08:59.310

Noe Crespo: Another participant may sure that his father got vaccinated but said he didn't take the vaccine himself, because he couldn't risk now being able to take care of his father next slide.

39

00:09:00.900 --> 00:09:07.260

Noe Crespo: Other people may be vaccine indifferent, who have remained relatively untouched by the pandemic.

40

00:09:07.680 --> 00:09:18.180

Noe Crespo: This might include people who are self employed or work under the table living in rural, remote places and those who whose children are not in public school systems such folks.

41

00:09:18.570 --> 00:09:26.970

Noe Crespo: Do not consistent consistently received Cohen 19 information regularly, particularly if they are not consumers of social or news media.

42

00:09:27.570 --> 00:09:43.680

Noe Crespo: We also learned that the initial messaging about prioritizing high risk groups may have backfired some under the age of 65 and in relatively good health may think that it's not necessary for them to get the vaccine for them if it's not required no action is taken next slide.

43

00:09:45.420 --> 00:09:59.700

Noe Crespo: Some are experts at self preservation, they are confident that they know how to protect themselves from corporate, for example, and essential worker said he was successful or taking all the necessary steps to prevent covert so from his point of view, there was no rush to take the vaccine.

44

00:10:00.960 --> 00:10:14.820

Noe Crespo: Others expressed the need to endure I want our is the Spanish term by necessity, they felt the need to bear up push through and avoid complaining about daily struggles getting sick is an inconvenience that can preclude economic ruin.

45

00:10:15.840 --> 00:10:20.580

Noe Crespo: Other reasons for not getting vaccinated or people's reliance on their faith versus a vaccine.

46

00:10:21.000 --> 00:10:32.700

Noe Crespo: This may be reinforced, when a person feels that the formal institutions won't take care of them and that's contributing further to their increased reliance on their faith, these are just some of the main findings from our work in California, thank you.

47

00:10:41.280 --> 00:10:49.260

Daniela Rodriguez | JHSPH: Thank you, Dr Chris Paul when he is when a fairly new many years i'm going to be talking about the work that we've been doing in baltimore city with our latinx residents.

48

00:10:49.860 --> 00:10:56.730

Daniela Rodriguez | JHSPH: And, most of our Latino residents are immigrants primarily Spanish speakers some speak primarily indigenous languages.

49

00:10:57.150 --> 00:11:03.450

Daniela Rodriguez | JHSPH: And you'll see a number of intersections between the work that the the issues that we're seeing in the ones that Dr Chris talked about.

50

00:11:03.780 --> 00:11:15.120

Daniela Rodriguez | JHSPH: including issues of access, so we have technological access where so many of our folks don't have access to computers or smartphones or even data plans that allow them to access the information that's often online around the globe, including vaccination.

51

00:11:16.620 --> 00:11:31.590

Daniela Rodriguez | JHSPH: We also see issues around livelihood access, where the people who are who were working with are primarily daily burst construction for men off of domestic work for women, and they cannot afford to take a day off work to go get vaccinated.

52

00:11:32.310 --> 00:11:38.670

Daniela Rodriguez | JHSPH: Because it means not putting food on their tables or not being able to have enough money to send home to their families and their origin countries.

53

00:11:39.450 --> 00:11:45.270

Daniela Rodriguez | JHSPH: There are also a lot of concerns around immigration enforcement and fears that if they go get vaccinated there will be.

54

00:11:45.840 --> 00:11:53.130

Daniela Rodriguez | JHSPH: Police or ice in these places will end up in a database that will identify them to potentially be deported next.

55

00:11:54.060 --> 00:12:06.300

Daniela Rodriguez | JHSPH: And next again, please they're also linked persistent language issues and where we see both on site and online activities not having sufficient resources in Spanish, to be able to navigate the.

56

00:12:06.750 --> 00:12:13.590

Daniela Rodriguez | JHSPH: navigate the available resources next, but I think one of the biggest issues we saw is that a number of our.

57

00:12:14.160 --> 00:12:25.170

Daniela Rodriguez | JHSPH: Community Members want to get vaccinated, so there is demand, but there just isn't enough supply, in particular, initially, when the vaccination was restricted to certain groups and either these folks did not.

58

00:12:25.530 --> 00:12:33.060

Daniela Rodriguez | JHSPH: were not eligible or they did not have the documentation the formal documentation to indicate their eligibility is like a pay Stub next.

59

00:12:34.320 --> 00:12:45.030

Daniela Rodriguez | JHSPH: These issues reflect the earlier and persistent in equity and access issues that you know residents in baltimore city have experienced and covert exacerbated these which is not.

60

00:12:45.390 --> 00:12:58.890

Daniela Rodriguez | JHSPH: Which is not new, this is something that's experienced by a number of vulnerable populations in our city and beyond, and we saw that turn into disproportionate effect on our lives, you know residents with so many getting sick and showing up to care so late, because of these concerns.

61

00:12:59.970 --> 00:13:07.350

Daniela Rodriguez | JHSPH: non governmental organizations stepped into this gap to provide testing to provide food distribution and other supports but it wasn't enough next.

62

00:13:08.580 --> 00:13:20.160

Daniela Rodriguez | JHSPH: we're now seeing agencies working together government and non governmental agencies working together to offer vaccination sites where people are so in their communities and neighborhoods at churches places where they congregate.

63

00:13:20.490 --> 00:13:22.710

Daniela Rodriguez | JHSPH: During days and hours, where they can actually attend.

64

00:13:23.130 --> 00:13:36.930

Daniela Rodriguez | JHSPH: And i've also included here an infographic in Spanish that's been now that indicates how folks can be registered for vaccination both online, but, as well as a hotline that is managed by people who speak Spanish in order to be able to increase access to the vaccine.

65

00:13:37.770 --> 00:13:39.990

Daniela Rodriguez | JHSPH: And with that i'll turn it over to Dr bronson.

66

00:13:44.910 --> 00:13:45.840

Emily Brunson: Thank you, both.

67

00:13:48.270 --> 00:14:06.480

Emily Brunson: Both of you worked in Hispanic Latino communities so i'd like you to talk about for a minute what strategies by health departments hospitals Community based groups and other stakeholders have most enabled members of your local communities and baltimore and San Diego to get vaccinated.

68

00:14:09.060 --> 00:14:18.570

Daniela Rodriguez | JHSPH: Well, I can say that in baltimore with there's been a reliance and some could even say an over reliance on non governmental organizations that had the penetration in this community in these communities.

69

00:14:19.230 --> 00:14:28.170

Daniela Rodriguez | JHSPH: Some of our sort of more standing institutions like the hospital systems and the state and city agencies just didn't have the kind of networks to reach out to these folks.

70

00:14:28.590 --> 00:14:37.050

Daniela Rodriguez | JHSPH: And so there's been a reliance on the on those networks outreach, in particular, but also layering of services, so if there's.

71

00:14:37.530 --> 00:14:43.530

Daniela Rodriguez | JHSPH: You know, so if we're having testing site try to also offer food distribution and try to maintain those connections with people.

72

00:14:43.920 --> 00:14:52.230

Daniela Rodriguez | JHSPH: Obviously language is a big issue but also making sure that services are provided or our connections are being made in a way that's culturally competent has been really important as well.

73

00:14:54.150 --> 00:14:57.930

Noe Crespo: Thank you for that question, I can offer three examples our county health department.

74

00:14:58.290 --> 00:15:08.910

Noe Crespo: and other Community based agencies hired train and deployed a large workforce of Community health workers, so this was a major contributor to promoting and increasing vaccination updates among Hispanics Latinos in San Diego.

75

00:15:09.510 --> 00:15:14.820

Noe Crespo: The other is that county and Community clinics set up various mobile pop up vaccination sites.

76

00:15:15.330 --> 00:15:22.740

Noe Crespo: Within the hardest hit communities which in included bilingual and bicultural staff this reduced transportation related language barriers.

77

00:15:23.070 --> 00:15:34.350

Noe Crespo: And then the last is the state of California handed over large quantities of vaccines to local community clinics, so that they can decide how to best distributed the vaccines to their patients so, for example, some clinics will providers.

78

00:15:35.490 --> 00:15:44.460

Noe Crespo: decided to expand eligibility criteria, including ethnicity or not only based on age and that increase uptake among the most high risk populations.

79

00:15:46.590 --> 00:15:52.560

Emily Brunson: Thank you so when you're both cutting it with the Hispanic and Latino communities that you worked with.

80

00:15:53.490 --> 00:16:00.660

Emily Brunson: instant very different ways it's obviously a majority of the population in San Diego in the region that your team was working in no way.

81

00:16:01.140 --> 00:16:20.400

Emily Brunson: But this is a minority minority population in baltimore with with Danielle his team so thinking about what's happened what additional proof improvements to the local pub in 19 vaccination efforts, would you recommend based on on your research and these areas.

82

00:16:22.260 --> 00:16:26.190

Daniela Rodriguez | JHSPH: Well, one of the things that we've seen change over time and we hope actually persists.

83

00:16:26.820 --> 00:16:39.270

Daniela Rodriguez | JHSPH: As a change in practice is actually an effort for as new programs are being rolled out that we're thinking about our immigrant communities front and Center not necessarily planning for the majority and then retrofitting it later down the line.

84

00:16:39.510 --> 00:16:42.150

Daniela Rodriguez | JHSPH: Because they end up getting left further behind.

85

00:16:42.990 --> 00:16:53.340

Daniela Rodriguez | JHSPH: And in fact that example that I gave with the infographic that vaccine registration site for here for baltimore city was was planned to be both in English and in Spanish, at the outset, and that was a change and how.

86

00:16:53.790 --> 00:17:00.390

Daniela Rodriguez | JHSPH: Our agencies were typically working that's the kind of thing that we hope persists, I mean, but it also reflects and I believe that report talks about this.

87

00:17:00.690 --> 00:17:14.190

Daniela Rodriguez | JHSPH: Is you know, there are infrastructure and capacity deficits within our within our health agencies that make it difficult to be able to have the kind of connection persistent connection penetration in marginalized communities that needs to be addressed.

88

00:17:16.440 --> 00:17:23.400

Noe Crespo: Thank you there's a few recommendations that we can point to, for example, immigration policies need to be clearly articulated to and by.

89

00:17:23.700 --> 00:17:35.760

Noe Crespo: Law enforcement Homeland Security lawmakers and public health leaders and then to the Hispanic Latino community and those that are meant to serve the vaccination side, so that the public burden policy is no longer a barrier concern.

90

00:17:36.330 --> 00:17:46.260

Noe Crespo: Also, vaccines, need to be ubiquitous and getting vaccinated should be the default and easy choice, this includes recommending that employers make getting vaccination easy an easy option.

91

00:17:46.920 --> 00:17:58.260

Noe Crespo: at work sites for their workers additionally healthcare providers faith based leaders need to get vaccinated and promote the vaccines among their congregants and their patients relatives and friends.

92

00:18:00.870 --> 00:18:06.300

Emily Brunson: Thank you, both very much will now turn to our second observation.

93

00:18:07.770 --> 00:18:09.900

Emily Brunson: i'm going to go ahead and screen share again.

94

00:18:11.460 --> 00:18:21.900

Emily Brunson: So the second observation in the report that we'd like to highlight is that assuming communities of color are homogenous is a critical error.

95

00:18:22.710 --> 00:18:40.320

Emily Brunson: We do want to acknowledge that commonalities exist racial and economic inequality is, for example, or economic and racial inequalities are common in in both of these areas, but at the same time differences do exist.

96

00:18:47.790 --> 00:18:49.500

Emily Brunson: So, for example.

97

00:18:52.530 --> 00:18:56.880

Emily Brunson: Where communities are located can also create similar experiences.

98

00:18:57.810 --> 00:19:05.910

Emily Brunson: urban areas, for instance, have more developed communication and transportation infrastructure, compared to frontier and rural locations.

99

00:19:06.420 --> 00:19:13.590

Emily Brunson: Despite these similarities, however, differences also exist, and these differences result in unique experiences.

100

00:19:14.190 --> 00:19:25.440

Emily Brunson: black and Hispanic Latino persons, for instance, experience racial inequality in very different ways and due to factors such as language, culture and historical experiences.

101

00:19:26.160 --> 00:19:38.760

Emily Brunson: within communities as well, demographic characteristics like age, gender and political affiliation can also lead to disparate personal experiences and perspectives among Community members.

102

00:19:39.450 --> 00:19:50.310

Emily Brunson: So for this observation, we will be hearing from Dr Elizabeth cartwright Liz is a professor of anthropology at Idaho State University and she is the KPI for our Idaho team.

103

00:19:50.970 --> 00:20:03.300

Emily Brunson: Following Liz we will hear from Dr stephanie mcclair stephanie as an associate professor of anthropology at the University of Alabama and she is the key is for the Alabama team so Liz over to you.

104

00:20:05.640 --> 00:20:06.510

Elizabeth Cartwright: Thank you Emily.

105

00:20:08.130 --> 00:20:15.510

Elizabeth Cartwright: And our team of university professors and students has worked with Hispanic Community members in rural Idaho since 1999.

106

00:20:16.590 --> 00:20:22.380

Elizabeth Cartwright: Many things have changed over the last 20 years Hispanic agricultural workers are no more diverse than ever.

107

00:20:22.980 --> 00:20:31.170

Elizabeth Cartwright: Our research shows the different generations have vastly different experiences, even in these small somewhat remote towns on on the snake river plane.

108

00:20:31.830 --> 00:20:38.430

Elizabeth Cartwright: And these small rural communities individuals know each other to communicate easily they have a shared sense of belonging.

109

00:20:39.120 --> 00:20:52.290

Elizabeth Cartwright: None of these things should be underestimated, when it comes time to face difficulties, such as those that occurred during the pandemic, as we strive to create livable places for future generations Size matters and bigger is not necessarily better.

110

00:20:54.090 --> 00:21:05.550

Elizabeth Cartwright: We learned much about vaccination perceptions next slide from conducting 41 interviews and three focus groups younger people tend to have better access to scientific information.

111

00:21:06.210 --> 00:21:15.270

Elizabeth Cartwright: Older individuals rely heavily on the younger generation to show new ideas and alleviate fears, they also tend to rely more on information from back home and Mexico.

112

00:21:15.780 --> 00:21:24.450

Elizabeth Cartwright: constant contact between Idaho and Mexico is facilitated by social media of all kinds, information travels quickly back and forth across the borders.

113

00:21:25.350 --> 00:21:34.110

Elizabeth Cartwright: Among males aged 18-60 the need to work was a resounding reason for getting vaccinated the vast majority of men in this category we're working in agriculture.

114

00:21:34.590 --> 00:21:45.180

Elizabeth Cartwright: Several interviewees to come on temporary work pieces from Mexico ultimate working on the large farms spoke about how their employers had gotten the vaccines for them and they had received the vaccines.

115

00:21:47.160 --> 00:21:59.280

Elizabeth Cartwright: The local clinics pharmacies and health department all the dumb vaccine clinics at the farms and warehouses, no one spoke about having difficulties and accessing a vaccine if they wanted one and all, but a couple of interviewees wanted the vaccine.

116

00:22:00.870 --> 00:22:07.560

Elizabeth Cartwright: Next slide well vaccines may be available there's a lack of health insurance for many of the individuals working in agricultural jobs.

117

00:22:07.950 --> 00:22:19.560

Elizabeth Cartwright: The fear of getting sick and losing work is palpable in interview responses, the huge hospital bills face families whose members were very sick with covid early independent or strong incentive for vaccination.

118

00:22:21.570 --> 00:22:27.390

Elizabeth Cartwright: those individuals who knew someone who had been very sick or died of covid 19 often stated that is the reason for wanting the vaccine.

119

00:22:28.170 --> 00:22:33.240

Elizabeth Cartwright: Our team has helped local healthcare professionals develop just in time interventions.

120

00:22:33.630 --> 00:22:41.010

Elizabeth Cartwright: Early this spring we determined that undocumented workers were concerned about going to a government sponsored public health office to get vaccinated.

121

00:22:41.580 --> 00:22:44.970

Elizabeth Cartwright: People were afraid that they would have to show proof that they were in the US legally.

122

00:22:45.480 --> 00:22:55.920

Elizabeth Cartwright: Our team worked with the local public health office to develop a flyer that expressly stated that no documentation of any kind, would be required for a person to receive a vaccination through their office.

123

00:22:56.460 --> 00:23:08.190

Elizabeth Cartwright: and additional flyer was developed in Spanish that explained, where one could get the code 19 vaccines, members of the research team distributed the flyers to local farms and Latino grocery stores where many members of the Hispanic Community live and work.

124

00:23:09.780 --> 00:23:22.260

Elizabeth Cartwright: Our TEAM members to have improved local vaccine access and they will carry understandings gained working on the Community backs project into their professional futures, helping to make our small corner of the world a better place, thank you.

125

00:23:27.450 --> 00:23:40.440

Stephanie McClure: Our findings around non homogeneous are very informative but not surprising is the anthropologist one of the things we know is that human groups are characterized by similarity and difference in the both similarity and difference, are important.

126

00:23:40.920 --> 00:23:58.650

Stephanie McClure: This was certainly true in Alabama and begins with codes effects in our target counties, we found similarity and difference at the county and individual levels, the experiences of the virus and an experience intention and action around that vaccination next slide.

127

00:24:00.180 --> 00:24:18.360

Stephanie McClure: There are similarities and differences between black majority and black minority counties in Alabama vaccination rates are higher among blacks than whites in rural Alabama counties, however, vaccination rates are below black population proportion in our three black majority county.

128

00:24:19.560 --> 00:24:30.030

Stephanie McClure: State level and grassroots access efforts and grassroots persuasion efforts explained the relative success in vaccinating older black Community members.

129

00:24:30.420 --> 00:24:41.700

Stephanie McClure: But access and hesitancy continue to be barriers to progress towards population immunity This brings us to the consideration of variability within communities next slide.

130

00:24:43.950 --> 00:24:55.500

Stephanie McClure: response to experience with the virus is not necessarily predictable on its face the response that you see here from one of our participants fits the mainstream vaccination protects narrative.

131

00:24:55.950 --> 00:25:04.980

Stephanie McClure: After her husband's week of severe illness, during which he lost 25 pounds this woman and her husband were vaccinated as soon as they could be next slide.

132

00:25:06.690 --> 00:25:23.220

Stephanie McClure: But the response depicted here does not fit the vaccination protects narratives after the death of her mother from Kobe this participant wanted nothing to do with anything coven related including vaccination next slide.

133

00:25:26.250 --> 00:25:33.000

Stephanie McClure: it's not always clear what did or will persuade people to be vaccinated so we have gained some insight.

134

00:25:33.540 --> 00:25:41.580

Stephanie McClure: mini cited efforts of those, like the first participant who on this slide who encouraged vaccination among her family members.

135

00:25:41.790 --> 00:25:58.440

Stephanie McClure: And then there are those, like the second participant, who see the virus and the vaccine as equivalent risks, it is often not immediately clear how to shift that balance of fear, however, it is clear that movement from hesitate from hesitancy to vaccination takes time.

136

00:25:59.850 --> 00:26:00.480

Stephanie McClure: Next slide.

137

00:26:02.460 --> 00:26:09.630

Stephanie McClure: If there is a common barrier to vaccination among our participants, it is distrust of medicine and the healthcare delivery system.

138

00:26:10.170 --> 00:26:15.870

Stephanie McClure: overcoming distrust takes time So how do we move towards population immunity in the meantime.

139

00:26:16.470 --> 00:26:24.210

Stephanie McClure: One participant frame her choice to be vaccinated as a combined response of experience, logical action and faith.

140

00:26:24.750 --> 00:26:40.530

Stephanie McClure: her answer won't work for everyone, but it suggests a framework that we continue to seek combinations of experience, logical action and trust that will persuade other Community members to join the ranks of the vaccinated Emily.

141

00:26:43.200 --> 00:26:52.590

Emily Brunson: Thank you very much stephanie and Liz so i'd like to turn to a few questions for for the two of you and listening to each other's presentations.

142

00:26:53.310 --> 00:27:06.540

Emily Brunson: And, and you dealt with, with different ethnic and racial communities, obviously in different areas of the country, but you both had rural areas in your sights it was that was all Idaho and and part of the Alabama.

143

00:27:07.650 --> 00:27:19.260

Emily Brunson: Research Area so thinking about this and listening to each other's presentations, what do you feel was the the biggest similarity between your communities and and what was the biggest difference.

144

00:27:21.210 --> 00:27:37.140

Stephanie McClure: One of the biggest similarities, I saw was the importance of family to getting information about vaccination and also family considerations in the decision to to be vaccinated so in Alabama.

145

00:27:37.950 --> 00:27:45.330

Stephanie McClure: younger family members, often facilitated access to vaccine appointments in the early days, because of problems with broadband.

146

00:27:45.720 --> 00:27:53.100

Stephanie McClure: Access or skill level with the Internet, so people really looked out for each other and older people really took a role in persuading.

147

00:27:53.730 --> 00:28:06.600

Stephanie McClure: There are other family members to be vaccinated in many cases, so family was really the the first level of connection and persuasion for people to be vaccinated in our in our group.

148

00:28:09.360 --> 00:28:17.370

Elizabeth Cartwright: Thank you stephanie um you know, I think that one of the things that really stood out to me is that in both of these rural communities.

149

00:28:18.570 --> 00:28:28.410

Elizabeth Cartwright: You know, we have these groups of majority and minority populations and the vaccination rates are very different between the two oftentimes.

150

00:28:28.830 --> 00:28:39.120

Elizabeth Cartwright: And I think that one of the interesting things at this point now for both of our rural communities, a similarity I think would be that I think it would be an important time to reach out and to try to figure out.

151

00:28:40.110 --> 00:28:53.490

Elizabeth Cartwright: What the majority, people are thinking and how the interaction between groups in these areas are really giving people the information that they have and it's pushing decision making, one way or the other.

152

00:28:55.710 --> 00:29:04.650

Stephanie McClure: And in terms of difference, I would say, one of the biggest one is that in the Idaho you had this large group of farm workers who were already vaccinated.

153

00:29:04.950 --> 00:29:15.510

Stephanie McClure: And, or who who stopped vaccination and then really large numbers, and this is a younger group of people and that's the group of people that were having difficulty.

154

00:29:16.080 --> 00:29:35.940

Stephanie McClure: Getting vaccinated in Alabama and I think Idaho is kind of pointing the way that work sites as know a mentioned are going to be really critical to to making vaccination easily accessible to people and and then tying that vaccination to work I think it's going to be a key strategy.

155

00:29:36.990 --> 00:29:50.310

Elizabeth Cartwright: I so agree stephanie um you know, the one thing that really stood out to me as we've been working in these communities for 20 years I mean we're working now with the sons and daughters of our first group of promoters a seller that we started, you know in 1999.

156

00:29:51.900 --> 00:30:00.810

Elizabeth Cartwright: And one of the things that we've seen over the years is that people work in the same places, and they have really strong relationships between employers and employees.

157

00:30:01.440 --> 00:30:18.240

Elizabeth Cartwright: And so, these long term work relationships that people can rely on and trust in is, I think a really strong building block for creating a good continued vaccine availability and acceptance.

158

00:30:19.980 --> 00:30:29.520

Emily Brunson: Thank you so considering the differences that exists among communities of color across the US, but also within these communities.

159

00:30:30.180 --> 00:30:44.490

Emily Brunson: That really make one size fits all solutions impossible, what can be done, how can local and state public health departments, for example, work more effectively with communities in their areas.

160

00:30:46.020 --> 00:30:57.480

Stephanie McClure: Well, again, I would say that we can take a lesson from Idaho and also from San Diego and in terms of their use of Community health workers, I think that's going to be key.

161

00:30:58.020 --> 00:30:59.670

Stephanie McClure: Particularly to for.

162

00:31:00.300 --> 00:31:09.630

Stephanie McClure: Public health promotion successful public health promotion, particularly in rural Alabama because what we've seen you know, over and over again, is the kind of disconnect.

163

00:31:09.840 --> 00:31:25.320

Stephanie McClure: From the the sort of state architecture of public health delivery and what happens on the ground with people who live in more remote areas so that Community health worker model I think it's going to be critical to changing the public health profile in Alabama.

164

00:31:27.270 --> 00:31:34.290

Elizabeth Cartwright: You know, I think that the Community health worker model is it's such a beautiful thing and it's such a great first step.

165

00:31:34.890 --> 00:31:44.580

Elizabeth Cartwright: And you know we took it maybe you know now maybe 15 years ago and I think we've really tried to now move on from that, and so our approach was to.

166

00:31:45.330 --> 00:31:53.610

Elizabeth Cartwright: engage 20 of our young university students, half of them were Hispanic first generation college students.

167

00:31:54.030 --> 00:32:01.620

Elizabeth Cartwright: To engage those as members of the research team, so they were Community members going to college and they were also part of the research team.

168

00:32:02.100 --> 00:32:09.300

Elizabeth Cartwright: Because it's in that it's in that moment when the students learn that they can and committee members, as they are.

169

00:32:09.570 --> 00:32:17.340

Elizabeth Cartwright: They learned that they can ask questions of the situation, they can gather data they can take that data and have a great seat at the table with the.

170

00:32:17.910 --> 00:32:26.610

Elizabeth Cartwright: You know, with our wonderful open public health department has allowed these students into the meetings and to see the students just glow when.

171

00:32:26.850 --> 00:32:39.810

Elizabeth Cartwright: When they are you know when they're asked their opinion it's just it's just great and so seeing how these students supporting their education and moving forward, I think that that's really a critical step.

172

00:32:41.370 --> 00:32:57.870

Emily Brunson: Excellent thank you both very much so, just as a reminder, we were going to get a time for audience questions, and if you have those please put those in the Q amp a box and we'll get to them in a moment, so we'll turn out to the third observation.

173

00:32:59.100 --> 00:33:01.080

Emily Brunson: i'm coming from the local research.

174

00:33:03.690 --> 00:33:15.180

Emily Brunson: So, and that is that hyper local responses to the pandemic results in better health outcomes Community lead organized and advocated Members who closed coven.

175

00:33:15.780 --> 00:33:23.160

Emily Brunson: Gaps a response gaps and stephanie and Liz were just giving us examples of some of those that occurred locally in their areas.

176

00:33:23.790 --> 00:33:36.840

Emily Brunson: we've also seen examples of this in the national media such efforts are particularly powerful because the grassroots organizations leading these initiatives already have the trust of Community members.

177

00:33:37.320 --> 00:33:46.890

Emily Brunson: They also understand the socio economic and cultural realities of their lives, this knowledge and understanding is critical as as trust.

178

00:33:47.340 --> 00:33:58.470

Emily Brunson: In fact, we propose through our local research that coven 19 vaccination is now moving at the speed of public trust and that without trust vaccination efforts.

179

00:33:58.980 --> 00:34:05.490

Emily Brunson: and especially covert 19 vaccination efforts moving forward or not capable of success.

180

00:34:06.360 --> 00:34:17.430

Emily Brunson: For this observation will be hearing from Dr Andrew plunk Andy is an associate professor of pediatrics at Eastern Virginia Medical School and he is the API for our Virginia team.

181

00:34:18.030 --> 00:34:29.280

Emily Brunson: Following Andy will hear from Dr Stephen Thomas Stephen is a professor of health policy management and the director of the Maryland Center for health equity at the University of Maryland school of public health.

182

00:34:29.790 --> 00:34:35.010

Emily Brunson: Stephen is the KPI for our Maryland Prince george's county team so Andy over to you.

183

00:34:36.300 --> 00:34:43.740

Andrew Plunk: Thank you very much, so here is Hampton roads, where we are working on it's the southeastern most region in Virginia.

184

00:34:44.430 --> 00:35:00.750

Andrew Plunk: The area itself is a mix of rural and urban communities Norfolk the city in which most of the team is located is more or less than the middle of that highlighted area there on the map and in our study we worked with area public housing communities next slide please.

185

00:35:04.500 --> 00:35:09.840

Andrew Plunk: will be found that differences between rural and urban areas seem to be very informative.

186

00:35:10.710 --> 00:35:20.520

Andrew Plunk: it's worth noting that even all access was far more restricted in rural areas of Virginia, many of those reasons regions achieved much higher than average vaccination rates.

187

00:35:21.510 --> 00:35:30.990

Andrew Plunk: On the other hand, not a single participant from the Hampton roads cities that we worked with reported that they had any barriers to getting a vaccine if they wanted one.

188

00:35:32.100 --> 00:35:43.230

Andrew Plunk: And vaccination rates and some of the cities here Norfolk, for example, are among the lowest in Virginia, however, I wouldn't call this vaccine hesitancy per se next slide please.

189

00:35:45.930 --> 00:35:57.330

Andrew Plunk: Instead um this really does seem to be related to a much more pervasive sense of mistrust and not just the vaccines, but rather almost everything that's happening right now.

190

00:35:58.500 --> 00:36:07.710

Andrew Plunk: And I think it's important to explain what this means trust seems to have real consequences for marginalized communities that most of us probably won't ever be able to fully understand.

191

00:36:08.640 --> 00:36:23.040

Andrew Plunk: And in this way trust could even be thought of as a survival strategy strategy mistress rather should be thought of as a survival strategy so in i'm talking about something that starts to represent a different way of looking at the world.

192

00:36:24.150 --> 00:36:30.000

Andrew Plunk: This type of mistrust seems to be associated with assuming that you have fundamentally different goals and values.

193

00:36:30.630 --> 00:36:43.860

Andrew Plunk: This isn't something that educational campaign, for example, will fix instead you address this by becoming more trustworthy and i'm convinced that the only way, you can do that is by building relationships next slide please.

194

00:36:48.240 --> 00:37:00.180

Andrew Plunk: I think our experiences get at some of what's really required to make this approach work we realized early on in the pandemic in that our engagement with our Community advisory board would be quite disrupted.

195

00:37:01.380 --> 00:37:07.920

Andrew Plunk: We couldn't just not easily transition to online meetings with them some of our cab, for example, had never used computers before.

196

00:37:08.790 --> 00:37:19.500

Andrew Plunk: So we have the responsibility for ensuring that we'd still be able to engage with our partners and our case being that make committing to not letting a lack of access technology, be a limiting factor.

197

00:37:20.370 --> 00:37:26.040

Andrew Plunk: Everyone we work with it's a tablet and unlimited data plan and as much technical support as they need.

198

00:37:27.270 --> 00:37:37.350

Andrew Plunk: So, how does all this worked out, I think it's gone really well as of yesterday, our team has had 166 zoom meetings with folks we've provided tablets do.

199

00:37:38.970 --> 00:37:47.400

Andrew Plunk: So what I didn't do what I didn't anticipate it always being able to build new relationships, especially not with communities who rightfully distressed outsiders.

200

00:37:48.270 --> 00:37:55.380

Andrew Plunk: When we started the lockdown with 11 cab members from Norfolk and now we're meeting with over 30 lake Community Members from all across our region.

201

00:37:56.460 --> 00:38:05.790

Andrew Plunk: And what we've been doing with the cab well they help interpret research findings that guide grant proposals and several Members have been co authors on recently submitted manuscripts.

202

00:38:06.840 --> 00:38:09.450

Andrew Plunk: So what is the key takeaway from this well, I think.

203

00:38:10.710 --> 00:38:19.470

Andrew Plunk: You have to commit to doing everything you can to create lasting respectful relationships in our case, one of the things that we had to do was ensure that folks had a way to talk to us.

204

00:38:20.190 --> 00:38:27.660

Andrew Plunk: The details of that got pretty involved with the technology and all that but, at the end of the day, it's still just a way to express a commitment to a relationship.

205

00:38:28.770 --> 00:38:31.860

Andrew Plunk: And I think that people will respond to that if you do it sincerely.

206

00:38:42.150 --> 00:38:43.440

Andrew Plunk: We have there we go.

207

00:38:49.800 --> 00:38:50.430

Stephen Thomas: Thank you.

208

00:38:51.480 --> 00:38:56.490

Stephen Thomas: nod your head Emily if you can hear me very good i'm Stephen Thomas.

209

00:38:57.720 --> 00:39:10.950

Stephen Thomas: From the community of actual rapid response team in Prince george's county and i'm so excited to be here and bring you greetings from our team, what does hyper local really me, and you know for us.

210

00:39:12.120 --> 00:39:29.580

Stephen Thomas: It was a recognition that Prince george's county has a population of almost 1 million people and 65% of them self identify as black another 820 percent identify as Latino or some other non white group.

211

00:39:32.580 --> 00:39:41.460

Stephen Thomas: We recognize that, even within this majority minority population there's heterogeneity next side.

212

00:39:42.300 --> 00:39:51.750

Stephen Thomas: Effects Prince george's county is seen as one of the wealthiest majority black counties in the United States, and yet there are pockets of poverty.

213

00:39:52.560 --> 00:40:05.580

Stephen Thomas: In Prince george's county was one of the hotspots in the state of Maryland for covert what you see here is how we built upon the existing infrastructure at our Center for health equity.

214

00:40:06.450 --> 00:40:10.770

Stephen Thomas: Where our theme is building bridges building trust building healthy communities.

215

00:40:11.430 --> 00:40:21.330

Stephen Thomas: And I just want to highlight one of those aspects and that's the work that we've been doing in barbershops and beauty salons Why not go where people already have trust.

216

00:40:21.990 --> 00:40:39.300

Stephen Thomas: Barber shops and beauty salons can be places where conspiracy theories spread or places where you get accurate information about code and an opportunity for people to make informed decisions, so, if you look at these images around the scene here.

217

00:40:40.380 --> 00:40:49.110

Stephen Thomas: We had our barbers and stylists including myself once we got fascinated We made it public, and we promoted that very important.

218

00:40:49.620 --> 00:40:59.250

Stephen Thomas: The other image, you see, there are two of our barbers getting a saliva Kovac test that we made possible for them now that's part of the conversation in the barbershops.

219

00:40:59.730 --> 00:41:07.800

Stephen Thomas: And we brought in graphic artists to translate the information into a format more accessible to the Community next side.

220

00:41:09.240 --> 00:41:20.160

Stephen Thomas: And so, with that look at what has happened we conducted the first covert vaccines in a barbershop in a beauty salon in the state of Maryland.

221

00:41:20.760 --> 00:41:34.410

Stephen Thomas: And it was hugely successful so successful that our efforts got picked up by the White House, and now this effort of bringing vaccines and barbershops and salons is occurring across the country.

222

00:41:35.760 --> 00:41:44.490

Stephen Thomas: here's how hyper local can also be hyper national that image in the middle, where you see the CNN coverage.

223

00:41:45.450 --> 00:42:04.440

Stephen Thomas: So the stories local but national take home misinformation is real, we need to address it number to meet people where they are no shame no blame and number three trust really matters it's not just the message, but also the messenger and with that i'll stop.

224

00:42:13.770 --> 00:42:21.930

Emily Brunson: My mommy Thank you Stephen and Andy and I think that the point that you're ending on Stephen the misinformation is pervasive.

225

00:42:22.290 --> 00:42:36.240

Emily Brunson: And it definitely is but, but one of the things that we're finding from our local research, including the research from Prince george's county and Virginia, is that trust matters and that's the key way to overcome this information.

226

00:42:36.960 --> 00:42:46.170

Emily Brunson: So both of you described building trust with Community members in your local areas and you both of your teams have been very successful at doing so.

227

00:42:47.040 --> 00:43:05.040

Emily Brunson: So i'd like you to consider how can this happen elsewhere, what steps can a mayor or a county public health official take to demonstrate to local communities of color that they in the coven 19 response and the vaccination campaign are trustworthy.

228

00:43:07.620 --> 00:43:09.060

Stephen Thomas: Let us know who you're throwing the ball to.

229

00:43:09.450 --> 00:43:10.440

Emily Brunson: You and Andy.

230

00:43:13.980 --> 00:43:19.500

Stephen Thomas: One of the things that we've figured out is that this zoom Hollywood squares.

231

00:43:20.520 --> 00:43:28.920

Stephen Thomas: has eventually brought us all together in ways that were unimaginable oh I got a mare on with a Barber and a physician and.

232

00:43:30.660 --> 00:43:38.580

Stephen Thomas: One of the leaders like Anthony foushee and the other national leaders to bring them all together in one room in a virtual space has been amazing.

233

00:43:39.150 --> 00:43:53.640

Stephen Thomas: And and and it shows respect for the common folk for the people from the common walk of life and when they have that interaction I think they come away feeling that they do matter and that's the beginning of establishing a relationship.

234

00:43:56.340 --> 00:43:58.710

Andrew Plunk: And I do think that the relationships are important.

235

00:43:59.850 --> 00:44:04.140

Andrew Plunk: and expressing a commitment to those relationships as well, making sure that.

236

00:44:05.520 --> 00:44:13.890

Andrew Plunk: you're going to give folks who might not have the ability, you know the capacity to do that without some help give them the ability to do that, you know, be able to connect with you to be able to talk to you.

237

00:44:15.060 --> 00:44:20.190

Andrew Plunk: I do think that when that's done sincerely like Steven mentioned this Hollywood squares kind of zoom environment.

238

00:44:21.810 --> 00:44:25.650

Andrew Plunk: You know, we have folks who like I mentioned never use computers before.

239

00:44:26.700 --> 00:44:36.360

Andrew Plunk: But they you know I, I know that they they set an alarm every week before our meeting so that they'll make sure that they attend because they enjoy it so much, and I think that.

240

00:44:37.590 --> 00:44:47.460

Andrew Plunk: That just wouldn't be the case if we hadn't made like if they didn't see that we had made a sincere commitment to them to want to do that to want to be there with them to experience that with them to get their feedback.

241

00:44:48.090 --> 00:44:57.870

Andrew Plunk: I think they anybody can do that local mayor's can do that as long as they are actually sincere about making those first steps and reaching out to folks and meeting them where they're at.

242

00:45:00.960 --> 00:45:08.340

Stephen Thomas: And you know that sincerity means that once you start the relationship you don't just abandon them and they've asked us this question.

243

00:45:08.820 --> 00:45:14.280

Stephen Thomas: Because they're seeing the health professionals in hospital systems come in fairly aggressively and they're saying, Dr T.

244

00:45:15.000 --> 00:45:30.930

Stephen Thomas: This for for them, or for us i'm saying what do you mean if they just give us the job and leave us with diabetes and heart disease and obesity, then then it's very clear it's for them, we can shop, we can do things and spend money and not spread virus.

245

00:45:32.190 --> 00:45:44.310

Stephen Thomas: I think that if we don't figure out a way of addressing those underlying conditions that made covert so bad, with this new infrastructure that we have, we would be missing an opportunity I have health systems down that are.

246

00:45:45.120 --> 00:45:51.930

Stephen Thomas: That now have trustworthiness because they've come on our heels into these shops and they've made a commitment.

247

00:45:53.160 --> 00:46:05.280

Stephen Thomas: in public that we will stay to address the diabetes and hypertension and guess what flu seasons right around the corner, how can we use this infrastructure to get ready for the next wave.

248

00:46:07.800 --> 00:46:08.730

Andrew Plunk: that's super important.

249

00:46:09.960 --> 00:46:14.160

Andrew Plunk: of being responsive to what Community needs are listening to them, making sure that you're going to be there.

250

00:46:14.880 --> 00:46:26.400

Andrew Plunk: Not just to get their feedback and maybe not do anything with it bring your success and your results back to them, report back to them make them involved in the whole process I think those are all very positive steps.

251

00:46:27.060 --> 00:46:31.530

Andrew Plunk: That I do think that anybody if we actually do commit to that can do at any level.

252

00:46:32.220 --> 00:46:42.420

Stephen Thomas: And you know Andy when we talk about measuring success, sometimes the reporters asked how many arms, did you get a vaccine in I have to explain to them or at the hell no wall.

253

00:46:42.900 --> 00:46:45.870

Stephen Thomas: we're going to have our people are saying hell no for no reason.

254

00:46:46.260 --> 00:46:53.190

Stephen Thomas: And so it's really the stories that are more important is that grandmother who brought her grandkids in to get fascinated.

255

00:46:53.550 --> 00:47:06.180

Stephen Thomas: it's the families who come, and I think that's what can mean of X is able to do with our hyper local approach to literally bring the stories of the people to the table, and at this phase in our effort.

256

00:47:06.840 --> 00:47:16.080

Stephen Thomas: Around the hesitancy which does not mean never it means taking the time and treating people with dignity and respect, we have a gentleman who came in hesitant.

257

00:47:16.680 --> 00:47:31.320

Stephen Thomas: And guess what he left hesitant, but he got fascinated you don't have to change your worldview, but he was treated in a way, where he felt that he was respected at this point that's vitally important.

258

00:47:33.090 --> 00:47:44.370

Stephen Thomas: It also is helping our health systems rebuild their relationship with a community that has been neglected simply based on the epidemiology of these preventable diseases.

259

00:47:45.000 --> 00:48:01.920

Stephen Thomas: And I think that they're recognizing you know what you kind of make your friends before you need them, and this has given them an opportunity to be visible and present in the Community in ways that they're having an Aha moment that they need to be here on route on a routine basis.

260

00:48:04.800 --> 00:48:21.690

Emily Brunson: Thank you, both for your comments, so at this point we're going to turn to questions from our audience and, once again, please, if you have any questions put them in the Q amp a box and i'd like to turn this over to Monica who will ask the questions that have been submitted so far.

261

00:48:23.250 --> 00:48:37.110

Monica Schoch-Spana: Good afternoon, everyone, and thank you for attending and thank you for loading up our Q amp a box with good questions our very first question comes from ronnie Robin of the New York Times.

262

00:48:38.490 --> 00:48:48.690

Monica Schoch-Spana: And that concerns issues surrounding low vaccination rates in the black Community for researchers who have worked among local black communities.

263

00:48:48.930 --> 00:49:00.210

Monica Schoch-Spana: Are there additional insights and nuances that you can share with our audience today about the low vaccination rates in the communities that you have worked with.

264

00:49:02.880 --> 00:49:13.590

Stephen Thomas: Well, let me just begin by saying at the very beginning of this pandemic our communities are black and brown communities were marinating in misinformation.

265

00:49:14.460 --> 00:49:28.800

Stephen Thomas: And it's not a criticism of our health departments simply being stretched to a point where they could not counter those things in real time, and so, by the time community of X comes on board and begins building that infrastructure.

266

00:49:29.820 --> 00:49:36.570

Stephen Thomas: Those communities were sitting with that misinformation for months and a lot of it was coming from the White House.

267

00:49:36.930 --> 00:49:55.860

Stephen Thomas: In the previous administration if we don't acknowledge that then we don't realize the the the impact that that has had you don't overcome that in seven months you don't overcome that in seven months, and so I think that we simply need to make the commitment for.

268

00:49:56.940 --> 00:50:06.360

Stephen Thomas: Long term engagement long term engagement no shame no blame it means you actually have to listen and.

269

00:50:07.170 --> 00:50:14.610

Stephen Thomas: And so the low vaccination rates are are complex, but we're seeing the needle move, and we need to give a time.

270

00:50:15.210 --> 00:50:22.500

Stephen Thomas: And and and even be more aggressive and letting people know what this delta variant really means now be mindful.

271

00:50:22.860 --> 00:50:35.220

Stephen Thomas: The counter messaging out there has money, and they have literally produce movies kind of tell black people not to be vaccinated we have headwinds, but we also have a strategy to move forward.

272

00:50:38.280 --> 00:50:49.050

Stephanie McClure: Just like this second to what Dr Thomas had to say he's absolutely right about the pervasiveness of the misinformation and how long it takes to overcome that and.

273

00:50:50.340 --> 00:50:59.130

Stephanie McClure: and also to point out that I think everyone has said that number one hesitancy is multifaceted and that overcoming hesitancy takes time.

274

00:50:59.520 --> 00:51:14.580

Stephanie McClure: i'd also like to point out that the projected resistance has actually lower than is actually was actually higher than the resistance that we've met, in other words, there were African Americans from the beginning.

275

00:51:15.150 --> 00:51:20.850

Stephanie McClure: Who were eager to get the virus and in the early days, the problem was access um.

276

00:51:21.540 --> 00:51:32.040

Stephanie McClure: And so we say, at least on the Alabama team, we say fight access with hesitancy which goes back to the point that Dr Thomas was making let's stay present.

277

00:51:32.340 --> 00:51:39.150

Stephanie McClure: You know let's meet people where they are let's work locally and and particularly in Alabama.

278

00:51:39.750 --> 00:51:58.080

Stephanie McClure: What I talked about in our data, the the vaccination rates among rural Whites are actually lower than the vaccination rates among rural blacks so so let's then talk about how access is being done in those rural areas, so that people have the opportunity to say yes.

279

00:51:58.740 --> 00:52:10.080

Stephen Thomas: And you know stephanie and because the question came up from a New York Times reporter in the paper consistently when they say hesitancy they say other reason is the tuskegee syphilis study.

280

00:52:10.500 --> 00:52:25.230

Stephen Thomas: And I want that reporter to know this, then in macon county rural Alabama stephanie they get they are getting vaccinated the sons and daughters of the tuskegee syphilis study participants have been vaccinated.

281

00:52:26.340 --> 00:52:43.440

Stephen Thomas: And they began on camera to say, do not use that legacy and the suffering of our ancestors, as the reason for not being fascinated and so that story needs to be lifted up even more the real contextual ization of tuskegee is that those men were denied treatment.

282

00:52:44.610 --> 00:52:52.980

Stephen Thomas: What we need to do now is make sure every effort is made to ensure that African Americans receive access to this vaccine and trusted settings.

283

00:52:53.460 --> 00:53:03.570

Stephen Thomas: And so stephanie, you are absolutely right, we have moved the needle there and we need that story to be told, more broadly, and for our stories, not to be behind a paywall.

284

00:53:05.010 --> 00:53:12.450

Stephen Thomas: Of trash and and misinformation flows freely we can't have the good information behind a paywall So how do we handle that with the new.

285

00:53:13.500 --> 00:53:15.480

Stephen Thomas: business models of our newspapers.

286

00:53:16.590 --> 00:53:23.880

Stephanie McClure: Indeed, and one more thing, before we move on to the next question, I also want to emphasize and the sons and daughters of the ski.

287

00:53:25.740 --> 00:53:35.940

Stephanie McClure: patrol participants are making this point as well, our African American and everyone on this panel who's talking about the African American Community has also made this point.

288

00:53:37.020 --> 00:53:47.970

Stephanie McClure: African Americans distrust and hesitancy is not merely historical it is rooted in the poor relationships that that Andy.

289

00:53:48.720 --> 00:53:59.310

Stephanie McClure: As Dr Thomas talked about it's rooted in a long and ongoing incidence of unequal treatment in the healthcare delivery system.

290

00:53:59.730 --> 00:54:09.330

Stephanie McClure: And tuskegee serves as a MED in him because it's it's a big event right but it captures in a capsule eights it stands for.

291

00:54:09.660 --> 00:54:20.640

Stephanie McClure: All of those instances of being turned away or treated less well or ignored or having racist assumptions informed things like the administration of pain medication.

292

00:54:20.850 --> 00:54:34.530

Stephanie McClure: You can't wish that away and dismissing it as and historically rooted mistrust belies the present day reality of the structural barriers to healthcare access that exists for African Americans in this country.

293

00:54:36.630 --> 00:54:48.030

Monica Schoch-Spana: Thank you stephanie Thank you Dr Thomas for those additional comments, because the question opened up the, the issue of misinformation we're going to introduce the question.

294

00:54:48.900 --> 00:55:06.180

Monica Schoch-Spana: From Madeline panel we've seen that the impact of misinformation on decision making is particularly difficult to address, especially when it comes to overcoming medical mistrust to get the vaccine, so I would invite our researchers.

295

00:55:07.200 --> 00:55:29.160

Monica Schoch-Spana: Both who have worked in local black and local Hispanic and Latino communities, can you please share successful strategies for addressing that, how do you how, what are the the tools, the tasks the interventions that can be used to diffuse in defang misinformation.

296

00:55:32.700 --> 00:55:39.630

Daniela Rodriguez | JHSPH: I can start to speak to that Monica what we've seen in our in our city there's one.

297

00:55:40.890 --> 00:55:46.620

Daniela Rodriguez | JHSPH: In terms of combating this information there's one channel Facebook channel that provides news.

298

00:55:47.040 --> 00:55:56.220

Daniela Rodriguez | JHSPH: it's a local reporter named bit about them, you know everyone knows him everyone watches his channel and one of the things that happened early on, is that folks working in the code response.

299

00:55:56.700 --> 00:56:05.610

Daniela Rodriguez | JHSPH: started working with him and started doing shows on his channel trying to combat misinformation talking about initially was about.

300

00:56:05.940 --> 00:56:11.010

Daniela Rodriguez | JHSPH: It was about protective measures, then it was about testing it's eventually become about vaccines.

301

00:56:11.370 --> 00:56:22.290

Daniela Rodriguez | JHSPH: And so having a clear understanding about who the messengers are who your food your local population really listens to watches um has been a good strategy here.

302

00:56:22.680 --> 00:56:29.190

Daniela Rodriguez | JHSPH: The other thing that that struck us as the pandemic has has sort of persevered.

303

00:56:29.520 --> 00:56:36.600

Daniela Rodriguez | JHSPH: has been the role of whatsapp groups and that's very common in our immigrant communities, because that's how they're communicating with folks back in their countries of origin and.

304

00:56:36.960 --> 00:56:46.230

Daniela Rodriguez | JHSPH: and information just whips around whatsapp groups so so quickly and unabated and it can come a little bit of an ECHO chamber for folks.

305

00:56:46.620 --> 00:56:55.290

Daniela Rodriguez | JHSPH: So one of the things that we've been trying to do is make sure that there are Community outreach workers are health workers are able to join those groups.

306

00:56:55.620 --> 00:57:04.470

Daniela Rodriguez | JHSPH: And do their best to be able to combat the misinformation as much as possible, as it comes around I mean we hear folks saying look I saw this video of this woman in a doctor's coat.

307

00:57:04.860 --> 00:57:16.410

Daniela Rodriguez | JHSPH: From you know, El Salvador, Guatemala, where folks are from and saying she's saying all these things, and she looks very serious and very professional and so that takes a conservative persistent effort.

308

00:57:16.740 --> 00:57:20.910

Daniela Rodriguez | JHSPH: To combat what ends up coming across as quite authoritative but, in fact, is spreading.

309

00:57:21.480 --> 00:57:27.150

Daniela Rodriguez | JHSPH: Terrible misinformation in these communities and so Those are some strategies that have been tried to your both using our local media.

310

00:57:27.750 --> 00:57:38.100

Daniela Rodriguez | JHSPH: partners that are connected to these communities as well as I don't want to use the word infiltrating but but joining these groups these these which are sharing this information.

311

00:57:39.360 --> 00:57:50.130

Monica Schoch-Spana: Daniela we have a request for you to put the link to the Facebook channel children mind putting that in the in the Q amp a or chat whichever works.

312

00:57:50.370 --> 00:57:55.410

Daniela Rodriguez | JHSPH: i'll do that as soon as you finish the Q amp a session, just so I can be paying attention to your heart patient.

313

00:57:55.440 --> 00:57:55.770

Good.

314

00:57:58.470 --> 00:58:03.750

Stephen Thomas: In Monaco what we've done are doing these web zoom town halls.

315

00:58:05.160 --> 00:58:15.240

Stephen Thomas: and bringing the Community voices to the table and not in the form of a lecture but in the form of a conversation, and they love that.

316

00:58:15.930 --> 00:58:31.920

Stephen Thomas: And and and then it was so successful in the black community are latinx friends that can you do one and all, Spanish and we did one in all Spanish with English translations and you could tell that just the passion with which they spoke and they told their stories.

317

00:58:33.030 --> 00:58:49.440

Stephen Thomas: really came through when they could speak in their own language and so that request keeps coming again people are now getting comfortable with this format this this zoom town hall format I think it's a way for us to counter some of the misinformation.

318

00:58:52.440 --> 00:58:58.440

Andrew Plunk: And I just add I think again, this idea where we need to really worry and be thoughtful about.

319

00:58:58.890 --> 00:59:03.570

Andrew Plunk: How we're being perceived if we are being perceived as truthful if we are being perceived as trustworthy and.

320

00:59:04.020 --> 00:59:13.800

Andrew Plunk: and doing what we can to maintain relationships with the communities with whom are interacting so that we don't just you know we're not being seen as this maintaining the status quo.

321

00:59:15.300 --> 00:59:31.650

Andrew Plunk: If we can you know if we can kind of flip that on its head meet people where they're at again be sincere when we do that, I think that we can it's not just education at this point it's who do they trust right and they're going to trust people who they have relationships with.

322

00:59:33.540 --> 00:59:34.230

Stephen Thomas: You may say.

323

00:59:35.310 --> 00:59:50.520

Monica Schoch-Spana: Oh thanks and in the interest of moving through some of them are questions, I want to pull in Jesse know dora's question, there are many national equity focused research projects, and that includes the red X up.

324

00:59:51.540 --> 01:00:11.040

Monica Schoch-Spana: initiative from sponsored by the national institutes of health, so what is happening researchers in your communities in your areas to coordinate your efforts with these other ones that are going on and how do you think the results from the research is going to be useful.

325

01:00:12.210 --> 01:00:17.220

Monica Schoch-Spana: To the communities with whom you and the others out there are working.

326

01:00:21.060 --> 01:00:30.210

Noe Crespo: Maybe I can briefly touch on that here in San Diego we are now also integrating strategies to understand vaccination update.

327

01:00:30.690 --> 01:00:44.520

Noe Crespo: Within the roddick's of infrastructure, and so we are now planning to include strategies and activities within those sites that radek sub sites to that now increased vaccination updates among those communities, so that is happening locally.

328

01:00:46.020 --> 01:00:53.460

Daniela Rodriguez | JHSPH: And I can say that here baltimore city, I mean the universal folks that are working with this community and immigrants in general is quite small so we a lot of us already.

329

01:00:53.790 --> 01:01:02.490

Daniela Rodriguez | JHSPH: know each other we're actually familiar with the we actually work with some of the Members on the remix team that's working with us here baltimore city, but the other thing that's happened is that.

330

01:01:03.120 --> 01:01:11.340

Daniela Rodriguez | JHSPH: there's a couple of city agencies that have come together to form specific subcommittees that are in that are focused on immigration, our.

331

01:01:11.970 --> 01:01:21.300

Daniela Rodriguez | JHSPH: outreach to immigrants and so those those end up being a forum, we need every couple of weeks those ends up being a forum for sharing what folks are doing what kind of strategies are being planned.

332

01:01:22.260 --> 01:01:35.070

Daniela Rodriguez | JHSPH: and trying to address and being cognizant of the fact that some access issues are common across our immigrant groups in the city, but some are not and so thinking about ways of addressing them in in ways that are responsive to each community's needs.

333

01:01:36.000 --> 01:01:46.620

Monica Schoch-Spana: Thank you, Daniel and thank you for those wonderful answers and questions i'm going to turn this back to Emily who's going to close out this portion of the discussion.

334

01:01:48.150 --> 01:01:49.530

Emily Brunson: Thank you, Monica.

335

01:01:50.910 --> 01:02:01.230

Emily Brunson: As as all of our audience audience Members have not experienced that local teams have been conducting research and results that have come out of their work.

336

01:02:02.670 --> 01:02:14.010

Emily Brunson: I think a exemplify the complexity of this issue we're not dealing with a simple issue, and because of that there aren't simple solutions, there are no silver bullets with us.

337

01:02:14.700 --> 01:02:26.670

Emily Brunson: But we are going to get to some recommendations that the the working group primarily was able to take based on these local observations and that will take us to the second half of our webinar.

338

01:02:27.780 --> 01:02:38.490

Emily Brunson: That session will be moderate moderated by Monica and so i'll turn it over to you just saying once again, thank you very, very much to all of our local team panelists.

339

01:02:41.550 --> 01:02:42.480

Monica Schoch-Spana: Thank you Emily.

340

01:02:43.560 --> 01:02:52.410

Monica Schoch-Spana: it's my pleasure to introduce the work of the working group that was informed by the local researchers.

341

01:02:53.610 --> 01:03:01.140

Monica Schoch-Spana: going to call out the five recommendations that were included within our report.

342

01:03:02.700 --> 01:03:13.410

Monica Schoch-Spana: And the first is humanized delivery and communication strategies for covert 19 vaccines and we have very concrete examples of that next slide.

343

01:03:16.140 --> 01:03:16.920

Monica Schoch-Spana: Next slide.

344

01:03:17.940 --> 01:03:25.680

Monica Schoch-Spana: From our local teams, the second is about embedding vaccination within a larger holistic recovery process.

345

01:03:26.730 --> 01:03:42.150

Monica Schoch-Spana: And those two recommendations are what the working group considers urgent that these need to be taken immediately, and that they can enhance vaccination coverage and underserved populations moving forward.

346

01:03:42.840 --> 01:03:54.300

Monica Schoch-Spana: The second set of recommendations were what we call the central that these are ones that can steadily drive systems level changes that advanced health equity.

347

01:03:55.230 --> 01:04:02.970

Monica Schoch-Spana: In an ongoing way, and the first is to develop a national immunization program to protect people throughout the life course.

348

01:04:03.930 --> 01:04:20.190

Monica Schoch-Spana: Second, second of our essential recommendations is rebuilding the public health infrastructure and properly staffing it for Community engagement and then lastly stabilizing the Community health system as the backbone for equity and resilience.

349

01:04:21.870 --> 01:04:34.080

Monica Schoch-Spana: And power if you could go back to the prior slide I do want to introduce our panelists they are members of the working group on equity and covet 19 vaccination.

350

01:04:34.770 --> 01:04:44.970

Monica Schoch-Spana: Before you, you will see the list of of all the working group members, they include Community advocates social scientist public health experts and leading back sinologist.

351

01:04:45.630 --> 01:04:56.130

Monica Schoch-Spana: And today we're going to hear from and prior to we can close out the slides Thank you we're going to hear from miss area to chicos.

352

01:04:56.610 --> 01:05:09.060

Monica Schoch-Spana: Who is a principal at urban Brazilian strategies and i'm going to introduce all of our panelists at once, because we're going to have a moderated discussion among them.

353

01:05:09.900 --> 01:05:22.350

Monica Schoch-Spana: Our second participant is Dr Walter orenstein and Walt is a professor of medicine pediatrics global health and epidemiology at emory university.

354

01:05:22.920 --> 01:05:34.200

Monica Schoch-Spana: Dr Richard creek, who is a visiting professor of political science at Texas State University and also an editor of the journal of critical infrastructure policy.

355

01:05:34.620 --> 01:05:40.920

Monica Schoch-Spana: And we also have with us today, Miss today Hamilton Franklin, who is the Vice President.

356

01:05:41.280 --> 01:06:01.710

Monica Schoch-Spana: of health equity and stakeholder engagement at health leads so it's a it's a wonderful pleasure to have these colleagues here with us today, the format for today is i'm going to present each of the five recommendations and turn and then ask our panelists to comment on recommendations.

357

01:06:02.940 --> 01:06:13.320

Monica Schoch-Spana: particularly those who have expertise and operational experience in dealing with the content so let's first kick off.

358

01:06:14.190 --> 01:06:19.500

Monica Schoch-Spana: With recommendation number one and area to chicos will be joining me so.

359

01:06:20.040 --> 01:06:30.270

Monica Schoch-Spana: Just to reiterate the second of the first of their urgent recommendations is humanizing delivery and communication strategies recovered 19 vaccines.

360

01:06:30.630 --> 01:06:49.140

Monica Schoch-Spana: Basically, that campaign should support more peer led and neighborhood based opportunities for Community conversation and convenient vaccine access, just like the barbershops and hair salon hair salons in Prince george's county, for example.

361

01:06:50.370 --> 01:07:02.820

Monica Schoch-Spana: And we heard from multiple local sites that this human touch really does matter in terms of the success within the hell no wall.

362

01:07:03.930 --> 01:07:10.680

Monica Schoch-Spana: days of the vaccination campaign as Dr Thomas put it so today, our first question is to you.

363

01:07:11.280 --> 01:07:21.120

Monica Schoch-Spana: you're one of the nation's leading voices on health equity stakeholder engagement and intercultural competence, can you comment on.

364

01:07:21.810 --> 01:07:39.210

Monica Schoch-Spana: How the Community health workforce in particular can best be engaged in activities to reverse the current vaccinations so down and also reverse the persistent unevenness in the vaccine coverage that we're seeing today.

365

01:07:41.640 --> 01:07:45.930

Tene Hamilton Franklin: i'll i'll start by saying a lot of my comments are going to.

366

01:07:47.070 --> 01:07:53.580

Tene Hamilton Franklin: are going to be similar to those that we had in the first and that that the discussion in the first hour.

367

01:07:54.060 --> 01:08:09.720

Tene Hamilton Franklin: And that just means that to me that it's really, really important that we take notes and we get this right, moving forward as a country we've made incredible efforts to engage communities throughout the country during the pandemic.

368

01:08:10.860 --> 01:08:21.870

Tene Hamilton Franklin: But imagine for a moment how effective our strategies, would have been if we had Community health workers, and if you today's workforce infrastructure in place before the Internet.

369

01:08:22.530 --> 01:08:39.120

Tene Hamilton Franklin: Imagine his Community health workers were robust part of our public health and healthcare infrastructure already if that were the case, a wonder what our local responses could and would have been more efficient and seamless, particularly when it comes to messaging.

370

01:08:40.200 --> 01:08:49.470

Tene Hamilton Franklin: And vaccination turnout it's not uncommon for us to turn to the Community when it comes to executing health interventions.

371

01:08:50.190 --> 01:09:05.250

Tene Hamilton Franklin: Public Health academia and local governments routinely do this they did we decide on an effective intervention, and then we turn to the Community and say Okay, now we need your help to execute this particular strategy.

372

01:09:06.210 --> 01:09:15.660

Tene Hamilton Franklin: We turned to Community health workers and community based workforce because, again, these are trusted members of the community it's possible.

373

01:09:17.100 --> 01:09:27.360

Tene Hamilton Franklin: To engage, but we should be engaging them at the beginning of the onset of the development of the strategy and it's possible for us to do that, but a lot of times, I think.

374

01:09:28.020 --> 01:09:43.620

Tene Hamilton Franklin: When we're faced with an emergency situation we do our best to scramble and say Okay, now we need your help, but again, imagine if we had taken time upfront to build out that infrastructure with Community health workers.

375

01:09:44.550 --> 01:09:50.310

Tene Hamilton Franklin: I think and i'm from where I said also my other role that I have as the.

376

01:09:51.150 --> 01:10:03.600

Tene Hamilton Franklin: Board of health number of my local health department, I think that our rollout with vaccination education messaging and turnout could have been a little bit more efficient.

377

01:10:04.110 --> 01:10:15.300

Tene Hamilton Franklin: Lastly, what i'll say is that wrong at my mom always told me it's funny how you never have time to do it right, the first in the first place, but when you do it wrong, you always have time to do it over.

378

01:10:15.750 --> 01:10:26.550

Tene Hamilton Franklin: This is how I think about ch w's now that we are in a law, I think it's an opportunity for us to take a step back and engage our Community health.

379

01:10:27.060 --> 01:10:47.370

Tene Hamilton Franklin: Workers and community based work for us at the table to develop that next strategy it's not too late, and so that is what I would encourage our local communities to do is pull our ch w's in or development of a vaccine strategy in response to Internet.

380

01:10:49.320 --> 01:10:52.110

Monica Schoch-Spana: Thank you to name much appreciate those comments.

381

01:10:53.280 --> 01:11:03.450

Monica Schoch-Spana: Walt if you could also comment on this first of two urgent recommendations that need to humanize delivery and communication strategies for cubby 19 vaccines.

382

01:11:03.900 --> 01:11:18.990

Monica Schoch-Spana: While you were one of the designers of the highly successful us childhood immunization program So could you please comment on why you see public health partnership with community groups and.

383

01:11:19.470 --> 01:11:38.250

Monica Schoch-Spana: Also, the Community health workforce that today was just discussing as a critical move for improving vaccine coverage and for coven 19 but then also living, leaving a legacy of greater public trust eliminate immunisations overall.

384

01:11:39.960 --> 01:11:40.770

Walter Orenstein: Thank you very much.

385

01:11:42.120 --> 01:11:49.860

Walter Orenstein: One I will be also emphasizing, a number of the points that were made, which is good in the sense that we're and a lot of agreement here.

386

01:11:50.490 --> 01:12:00.300

Walter Orenstein: With regard to the immunization program The first issue is, you need to make the right diagnosis, in order to design the right therapy.

387

01:12:00.870 --> 01:12:10.830

Walter Orenstein: And each community may have different problems, for example on the childhood side in some places, the problem was clearly.

388

01:12:11.460 --> 01:12:25.080

Walter Orenstein: financial barriers to access and that led to the development of something called the vaccines for children program which removed vaccine costs as a barrier for eligible children which about 40 to 50% of the population.

389

01:12:25.800 --> 01:12:39.480

Walter Orenstein: Other problems dealt with hesitancy and then for that to support research into determining who is trusted and who is not trusted and working with them on the childhood side, it turned out.

390

01:12:39.840 --> 01:12:52.980

Walter Orenstein: The primary care provider was one of the major people trusted and we worked very carefully with them The other thing that was very important, is we had substantial political support.

391

01:12:54.270 --> 01:13:04.980

Walter Orenstein: A colleague of mine trained at Hopkins said he was taught the p and public health is politics, you need to have that and we got a presidential initiative.

392

01:13:05.700 --> 01:13:12.690

Walter Orenstein: Supported by children's Defense fund where we're able to give substantial grants to states and localities.

393

01:13:13.110 --> 01:13:22.530

Walter Orenstein: And one of the requirements of that grant is they had to develop coalition's and reach out to Community based organizations to work on.

394

01:13:23.190 --> 01:13:34.530

Walter Orenstein: on reaching out and determining what is the problem, and how can we best address the problem and then, finally, we had a good accountability system we had good measurements.

395

01:13:35.070 --> 01:13:47.580

Walter Orenstein: And people who are interested use that, for example, the first measurement the national immunization survey curtain 1994 state of Michigan came out at the bottom.

396

01:13:48.240 --> 01:14:07.620

Walter Orenstein: The person in charge of immunization in Michigan use that to get it get funding from the state legislature and then he used that to build these relationships and Community relationships and enhance michigan's uptake having that kind of data would be very, very important.

397

01:14:10.020 --> 01:14:25.650

Monica Schoch-Spana: Thank you so much, well, thank you today we're going to now shift to the second of two urgent recommendations, and that is to anchor cover 19 vaccination for hard hit areas in a holistic recovery process.

398

01:14:26.790 --> 01:14:36.510

Monica Schoch-Spana: Essentially, this recommendation has two components and the first is that public agencies, hospitals and health systems nonprofit social service providers.

399

01:14:36.870 --> 01:14:46.860

Monica Schoch-Spana: Community based groups face faith faith based organizations and also Community health workers should all align around a whole person model of recovery.

400

01:14:47.220 --> 01:14:54.150

Monica Schoch-Spana: And then multiply the benefits of each vaccination counter and then the second part of the recommendation.

401

01:14:55.050 --> 01:15:01.950

Monica Schoch-Spana: Has a longer tail, and that is that state and local jurisdictions should now.

402

01:15:02.340 --> 01:15:13.560

Monica Schoch-Spana: Stand up a long term recovery and Community resilience organization applying a health and all policies approach and also pulling in data driven coordinating bodies.

403

01:15:13.800 --> 01:15:21.270

Monica Schoch-Spana: That already facilitate long range planning comprehensive planning disaster recovery economic development i'm going to ask.

404

01:15:21.960 --> 01:15:36.810

Monica Schoch-Spana: area to join us and reflect on this recommendation area, drawing on your former career and local government and your ongoing work on Community resilience to 21st century disasters.

405

01:15:37.230 --> 01:15:42.270

Monica Schoch-Spana: What advice would you give decision makers who may be thinking about covered 19 vaccination.

406

01:15:42.990 --> 01:15:58.020

Monica Schoch-Spana: In terms of restarting the economy, economy and getting back to normal, how should they be thinking about recovery from the pandemic from the pandemic, especially for constituents who have been hit the hardest over to you area.

407

01:15:58.830 --> 01:16:05.250

Arrietta Chakos: Well, first of all I want to thank you renee and walk through the wonderful comments they made, I deeply appreciate.

408

01:16:05.640 --> 01:16:14.850

Arrietta Chakos: Those comments about wishing we had that ch w structure in place when things hit and i'm also going to take waltz colleagues quote.

409

01:16:15.270 --> 01:16:25.320

Arrietta Chakos: The pee in public health is politics, and I agree with that and so really we have not so much a technical problem before we have people problems and challenges.

410

01:16:25.980 --> 01:16:35.760

Arrietta Chakos: So I want to give you a quote from one of our colleagues in the San Francisco mission district is shared by one of our working group colleagues Isabel neuron.

411

01:16:36.210 --> 01:16:48.540

Arrietta Chakos: And this leader said we can't return to normal, that is what God is here, in the first place, so the first thing I would like to recommend to local communities, and especially the sort of.

412

01:16:48.990 --> 01:16:56.730

Arrietta Chakos: Foot dragging bureaucrats, is that number one, we need to have shared and equalize local decision making.

413

01:16:57.240 --> 01:17:12.000

Arrietta Chakos: And we have to acknowledge and act on the power disparity in our communities that follow our local residents and their community groups as leaders for elected representatives, as we move into an equity and recovery movement.

414

01:17:13.140 --> 01:17:24.060

Arrietta Chakos: I think, also, we should think about making this moment, turning it into a movement as a community that's coalition has talked about so that we can start to build that proper.

415

01:17:24.690 --> 01:17:31.470

Arrietta Chakos: and productive health equity and health and health and all policies efforts into our daily lives.

416

01:17:31.710 --> 01:17:39.810

Arrietta Chakos: We can, I think leverage or vaccination efforts as gateway activities to a longer recovery implementation for communities writ large.

417

01:17:40.110 --> 01:17:51.840

Arrietta Chakos: We won't have to start at point zero, we have a lot to build on and the guidance in our local teams in our Community partners have shared with us really give us a ready made blueprint for the work ahead.

418

01:17:52.410 --> 01:18:00.000

Arrietta Chakos: So I would recommend that we anchor all new equity programs as parts of our general and comprehensive Community plans.

419

01:18:00.270 --> 01:18:08.220

Arrietta Chakos: That we built those out along with economic disaster mitigation and climate action requirements that all local communities have to work on.

420

01:18:08.730 --> 01:18:22.590

Arrietta Chakos: And I think once we move in these health and all policies efforts into our daily lives in neighborhood plan school safety plans are clean water programs or housing plans we're going to have something that will really.

421

01:18:23.790 --> 01:18:29.100

Arrietta Chakos: endure over time in the life of a local jurisdiction.

422

01:18:30.060 --> 01:18:37.620

Arrietta Chakos: we've had a lot of success, using this immersive technique, with respect to natural disaster readiness and resilience, which has been a field that i've worked in.

423

01:18:37.950 --> 01:18:44.880

Arrietta Chakos: and local government and regional government and we seen that protective X taken ahead of time to safeguard Community readiness.

424

01:18:45.090 --> 01:18:51.270

Arrietta Chakos: will save lives can reduce people suffering, but for the skeptics we're going to save some money as well.

425

01:18:51.570 --> 01:19:07.770

Arrietta Chakos: We can make a heart knows business decision as we learn from our public health colleagues that preventative actions ahead of time can increase our resilience women next disruption stripes and I think that is both a good humanitarian investment, it makes good business sense.

426

01:19:08.850 --> 01:19:18.840

Arrietta Chakos: The coalition at code at Community of X headquarters has learned a lot from our Community partners and our local residents and we're calling attention.

427

01:19:19.110 --> 01:19:26.520

Arrietta Chakos: To ways government can rebalance power sharing with communities of color and really look at how we can co produce health equity actions.

428

01:19:26.820 --> 01:19:37.890

Arrietta Chakos: and ensure that equitable decisions are adopted together with people in our communities in the lead to build for an equality for all future ahead.

429

01:19:38.220 --> 01:19:48.810

Arrietta Chakos: And I think right now in our country, we have literally have a funded mandate for health and Community equity and together we can use this possibility and make.

430

01:19:49.830 --> 01:19:54.240

Arrietta Chakos: Great progress in the disparities that we face the last 400 years.

431

01:19:56.100 --> 01:19:59.220

Monica Schoch-Spana: Thank you very much area to just sort of build on that.

432

01:20:00.720 --> 01:20:07.770

Monica Schoch-Spana: let's imagine you're the Mayor of hometown USA mean what capital human capital financial capital.

433

01:20:08.310 --> 01:20:20.460

Monica Schoch-Spana: or stakeholders, would you be, would you be pulling together right now to plan for long term recovery from the pandemic and given everything else you have to do as Mayor, how would this activity rate.

434

01:20:21.960 --> 01:20:28.680

Arrietta Chakos: Well, I would say number one as Mayor hometown USA hope you evolve voted for me and contributed to my campaign.

435

01:20:29.010 --> 01:20:37.020

Arrietta Chakos: And together we're going to work on moving forward in the coming years and number one, I think we have to look at how do we harvest.

436

01:20:37.440 --> 01:20:45.690

Arrietta Chakos: Funding from the American rescue plan that cares Act and the other server again unprecedented flow of federal resources.

437

01:20:46.020 --> 01:20:56.310

Arrietta Chakos: That have come into our local communities and use that to good purposes, we went forward on planning a long term equitable recovery for everybody in our Community.

438

01:20:56.820 --> 01:21:14.400

Arrietta Chakos: And I think that the second again the second national report gives government and public health leaders a set of actionable recommendations developed by community leaders and Community members, and we should you know put that to good use, so what I would I would do three things.

439

01:21:15.930 --> 01:21:21.210

Arrietta Chakos: As we launch into this long term recovery planning number one I would look at how I.

440

01:21:22.410 --> 01:21:29.970

Arrietta Chakos: convene and resource a health equity Council in my community and how the city government and local.

441

01:21:31.380 --> 01:21:41.610

Arrietta Chakos: Elected and appointed officials serve as the staff to that Council and it would be you know, composed of people from our.

442

01:21:42.570 --> 01:22:01.530

Arrietta Chakos: communities, all in all sectors in in hometown and I would i'd like to say is that we will compensate our health equity Council members and value the time and leadership that they're bringing to crafting a future plan for where our Community will go in the coming three to five years.

443

01:22:03.180 --> 01:22:14.850

Arrietta Chakos: Number two I would appoint an equity advisor in my office to help coordinate again and bring resources to that equity Council and to work on all things pandemic recovery related.

444

01:22:15.210 --> 01:22:18.630

Arrietta Chakos: And I think, together with our community leaders with other government.

445

01:22:19.590 --> 01:22:30.990

Arrietta Chakos: partners, along with our media will assess the implication of the health and Community recovery data that we're getting and share our findings and actions from that health equity.

446

01:22:31.290 --> 01:22:34.740

Arrietta Chakos: Council in a very participatory decision making contacts.

447

01:22:35.160 --> 01:22:46.350

Arrietta Chakos: And then third I would galvanize my neighboring mayors and city managers in the region to join a regional recovery alliance, so we can build on what the municipalities are doing together.

448

01:22:46.590 --> 01:22:54.480

Arrietta Chakos: You know, this is the recovery doesn't stop it or city borders, so we have to really look at broadening our look into the future.

449

01:22:54.660 --> 01:23:07.050

Arrietta Chakos: And figuring out how we can use this literally once in a generation opportunity to jumpstart equity action and improve our public health and our Community health systems writ large, I think that.

450

01:23:07.710 --> 01:23:15.060

Arrietta Chakos: local governments really have to take that evolutionary leap into allowing communities to lead the way.

451

01:23:16.800 --> 01:23:25.890

Monica Schoch-Spana: Thank you so much Jared area you've outlined very concrete, specific things that decision makers at the local level can do starting today.

452

01:23:26.910 --> 01:23:39.900

Monica Schoch-Spana: Well i'd like to return to you, particularly to address recommendation number three, which is to develop a national immunization program to protect people throughout the life course we have the.

453

01:23:40.800 --> 01:23:51.360

Monica Schoch-Spana: Vaccination moment to build out systems to provide a broader coverage for not only covered, but the 13 other vaccines that are urged for some are all adults.

454

01:23:51.990 --> 01:24:02.520

Monica Schoch-Spana: We do know well that immunization rates for racial and ethnic minority minority adults are far below those of white adults so.

455

01:24:03.210 --> 01:24:24.030

Monica Schoch-Spana: If we apply hyper local strategies, like the report recommends to improve broad coverage of covered 19, how can, how can hyper local strategies be folded into and help build out this national immunization program that could help people throughout the life course.

456

01:24:24.810 --> 01:24:37.890

Walter Orenstein: Thank you very much, I think that's a very important question first thing we need to realize is most of the vaccine preventable diseases are what's known as person to person spread diseases.

457

01:24:38.460 --> 01:24:44.520

Walter Orenstein: And if we have pockets in our population of poor vaccination status.

458

01:24:44.940 --> 01:25:04.740

Walter Orenstein: Then those populations service potential reservoirs to infect populations everywhere, so that it is in our universal interest to get immunization rates against the vaccine preventable diseases of adults up in every single population.

459

01:25:05.790 --> 01:25:19.620

Walter Orenstein: And so I think it's it's it's a mutual it's a win, win situation for all populations to as I think it's very important to try and work with people to.

460

01:25:20.490 --> 01:25:36.510

Walter Orenstein: Try and overcome the problem and build an infrastructure that can be helpful, not only for routine vaccination but in dealing with emergencies like covert 19.

461

01:25:37.080 --> 01:25:48.120

Walter Orenstein: We don't we have a great infrastructure in childhood vaccinations we close the gaps in immunization in childhood.

462

01:25:48.600 --> 01:26:00.360

Walter Orenstein: And we have, for the most part, for most vaccines about 90% and if there are gaps they're usually just a few percentage points in differences and that's because we have.

463

01:26:00.990 --> 01:26:09.390

Walter Orenstein: Substantial funding that was given to state local health departments to work with communities and getting innovation coverage up.

464

01:26:09.900 --> 01:26:22.860

Walter Orenstein: We need to do that for adults, we do a lousy job for adults, for example, for influenza and the last state, I saw on the CDC website for 2017 2018.

465

01:26:23.340 --> 01:26:41.610

Walter Orenstein: Is in the white population 49% in the black population 39% and Hispanic 37.5% and that's terrible, I think we need to do a lot better in order to reduce transmission.

466

01:26:42.000 --> 01:27:00.870

Walter Orenstein: and reduce the stress on a healthcare system and our employment system because of people potentially getting sick and I think the goal, I think, by raising this is to have an infrastructure that can be pulled into emergencies, instead of creating.

467

01:27:03.390 --> 01:27:26.280

Monica Schoch-Spana: Thanks well um you really sketch out a really critical public health and societal glow we're still in the middle of a pandemic, so is this now really the time to be talking about building out the national immunization program for protecting people throughout the full life course.

468

01:27:27.750 --> 01:27:33.840

Monica Schoch-Spana: It Why is now a good time for us to be talking about this and doing things about it.

469

01:27:34.410 --> 01:27:43.860

Walter Orenstein: I think the potential here is because we can get attention now people realize, we did not have the infrastructure available.

470

01:27:44.310 --> 01:27:54.840

Walter Orenstein: To deliver Kofi 19 vaccines in a fashion, we would have liked to if we had an adult immunization program that was in good shape.

471

01:27:55.290 --> 01:28:06.420

Walter Orenstein: We could draw on that infrastructure and, in my opinion, done a much better job in getting vaccines out to the people who need them with regard to covert 19.

472

01:28:06.930 --> 01:28:17.610

Walter Orenstein: This is the right time, because I think we're likely to have the best political will to get it, and the people that understand and move forward.

473

01:28:18.030 --> 01:28:34.380

Walter Orenstein: With funding efforts to enhance our adult immunization program for measles, we found that the outbreaks of measles was very, very helpful and getting that political will.

474

01:28:34.890 --> 01:28:41.220

Walter Orenstein: And it got us to presidential initiatives funding very, very substantial funding.

475

01:28:41.610 --> 01:28:49.980

Walter Orenstein: And I think now we have this big concern that we're not vaccinating enough people, and we need to develop a program.

476

01:28:50.220 --> 01:29:00.330

Walter Orenstein: where people can be reached where there's, for example, immunization registries where you can get to people and explain things and offer them information.

477

01:29:00.660 --> 01:29:14.280

Walter Orenstein: and overcome some of the hesitancy and also overcome some of the access barriers, and so this is the perfect time to begin thinking about this, we think of vertical programs in horizontal programs.

478

01:29:14.610 --> 01:29:30.090

Walter Orenstein: Vertical would be covert and just cover horizontally, is using coburn to pull along the overall problem program which will have substantial benefits well beyond the end of the code at 19 pandemic.

479

01:29:31.830 --> 01:29:38.010

Monica Schoch-Spana: Thanks very much well your comments dovetails very nicely with recommendation number four.

480

01:29:38.820 --> 01:29:51.150

Monica Schoch-Spana: Which is to rebuild the public health infrastructure properly staffing it for Community engagement and the three specific actions of this are leveling out boom and bust funding.

481

01:29:51.870 --> 01:30:02.250

Monica Schoch-Spana: mirroring the communities being served and strengthening human centered competencies i'm going to ask rich creek to join us rich.

482

01:30:03.360 --> 01:30:12.240

Monica Schoch-Spana: You once ran a metropolitan health department in a city that is Chicago where today 150 plus languages are spoken.

483

01:30:13.560 --> 01:30:15.720

Monica Schoch-Spana: Why is it so critical.

484

01:30:17.100 --> 01:30:29.160

Monica Schoch-Spana: That public health agencies committed to the strategical of promoting equity in their ranks at every level, including the department and including the their Department of Health.

485

01:30:30.900 --> 01:30:32.100

Monica Schoch-Spana: Rich please join me.

486

01:30:42.000 --> 01:30:42.810

Emily Brunson: Rich you're on mute.

487

01:30:53.520 --> 01:30:55.950

Richard Krieg: There we go, can you hear me okay.

488

01:30:56.130 --> 01:30:57.090

side and clear.

489

01:30:58.350 --> 01:31:04.350

Richard Krieg: Okay, I wanted to just start you know, Walter just mentioned.

490

01:31:06.600 --> 01:31:18.330

Richard Krieg: The measles situation and how it helps to fulfill more funding for for health departments and you mentioned that hundred 50 languages in the.

491

01:31:18.780 --> 01:31:27.810

Richard Krieg: Back in Chicago we had a measles epidemic, where we had a couple of kids I have several is it was a bad scene, all the major cities were experiencing this.

492

01:31:28.380 --> 01:31:41.610

Richard Krieg: And the vector for that virus was Latino daycare centers that were that were not certified in terms of reporting vaccinations and we learned back there that.

493

01:31:42.270 --> 01:31:55.290

Richard Krieg: Spanish has subdivisions, in terms of the Puerto Rican community and Mexican American Community living in Chicago so so I I say that take illustrate that.

494

01:31:56.100 --> 01:32:04.080

Richard Krieg: You cannot discharge the public health function unless you have connections to the Community and the ability to away to communities.

495

01:32:04.590 --> 01:32:14.850

Richard Krieg: You know, this issue is a push pull really the health departments cannot do what they what they have to do.

496

01:32:15.270 --> 01:32:24.060

Richard Krieg: Unless they have the involvement of communities and that really is the focus of the major public health organizations in the public health field.

497

01:32:24.720 --> 01:32:32.010

Richard Krieg: Going back to decades, the first report that was written on the future of public health was the Institute of medicine.

498

01:32:32.910 --> 01:32:48.300

Richard Krieg: Which said basically that health departments have to have an organic connection to communities in order to do the mainstream public health departments and anything else that that falls within their responsibilities by way of new events that happen.

499

01:32:49.620 --> 01:32:50.430

Richard Krieg: In addition.

500

01:32:51.480 --> 01:32:52.710

Richard Krieg: As its evolved.

501

01:32:53.970 --> 01:33:08.940

Richard Krieg: The current state of the art, and this is taught in schools of public health, and it also is the position of most health departments, and that is that the health leaders at the state and local level really need to be chief health strategists that.

502

01:33:10.110 --> 01:33:16.560

Richard Krieg: You have to have an ability to register with the problems are in the Community to study those.

503

01:33:17.040 --> 01:33:26.130

Richard Krieg: Problems and to take whatever strategy makes the most sense to solve those problems and to have the capacity to continue working those problems.

504

01:33:26.490 --> 01:33:35.100

Richard Krieg: So that in many of the plans that occurred, you cannot do it unless you're a Community Members involved, unless you have.

505

01:33:36.060 --> 01:33:48.630

Richard Krieg: A health department there reflects the Community within the ranks and unless you have the broad vision of looking towards health equity as the ultimate outcome of what the health department does.

506

01:33:49.650 --> 01:33:58.200

Richard Krieg: That is the state of the art of the field that's where health departments need to go, and I think that that perspective is very important to the Community also.

507

01:33:59.490 --> 01:34:05.250

Richard Krieg: Among the 2800 local health departments, for example, we have the full range of.

508

01:34:06.300 --> 01:34:15.330

Richard Krieg: Awareness of Community involvement and the need to have health department that interacts very closely with Kimberly.

509

01:34:16.320 --> 01:34:21.600

Richard Krieg: In terms of all of the work that he does so in places where you have.

510

01:34:22.500 --> 01:34:29.910

Richard Krieg: A lack of health involvement with the Community, there has to be an awareness, for the Community that they have health department.

511

01:34:30.180 --> 01:34:38.370

Richard Krieg: These to up its game and move in the direction that the field is going and that's a that's a tough thing to do, but that perceptual understanding.

512

01:34:38.970 --> 01:34:55.140

Richard Krieg: That modern public health cannot occur without solid linkages with the Community and in many cases leadership by the Community will not allow you to register what's happening, so I think that.

513

01:34:56.610 --> 01:35:07.050

Richard Krieg: You know, we have to look towards departments that are doing this, Nicole Alexander Scott and Northern Ireland has set up over the years it's part of the setup of like with these zones that.

514

01:35:07.740 --> 01:35:17.220

Richard Krieg: really are formulated on this basis, how do we achieve health equity in terms of populations that fall under the jurisdiction of the adult department.

515

01:35:17.850 --> 01:35:35.310

Richard Krieg: And there are other half departments at the state level also that have very good models one size does not fit all and you know we heard and in the first question first group of presentations from the Community, that there were Community health workers also that.

516

01:35:36.600 --> 01:35:41.520

Richard Krieg: You can list various categories of people to get involved college students were mentioned.

517

01:35:42.600 --> 01:35:53.580

Richard Krieg: I sit on the national advisory committee of the association returned peace corps volunteers and when we pull back those volunteers from other countries, based on program 19 everybody.

518

01:35:54.030 --> 01:36:09.330

Richard Krieg: Who was out in the world came back to the states we work to get people of color primarily but others as well involved in vaccination campaigns so resourceful thinking about how it is that you.

519

01:36:10.170 --> 01:36:18.720

Richard Krieg: You get people on the ground and working with the health department, are essential, the last thing I want to say is that schools of public health.

520

01:36:19.170 --> 01:36:31.020

Richard Krieg: really are should be a focal point in the barbershop interactions that we heard about before I love to hear a Barber say to a young African American or Latino youth.

521

01:36:31.980 --> 01:36:44.070

Richard Krieg: Everything and being the head of your of the health department here's here's a here's a job path it's pretty exciting and I think that schools of public health are really wanting to bring in.

522

01:36:45.450 --> 01:36:54.510

Richard Krieg: People who are reflecting into these around the country and have very good programs to arm them with with public health science, so I think it has to be a multi.

523

01:36:55.560 --> 01:37:03.600

Richard Krieg: Factor approach and the last thing I would say, following what Barry mentioned just now, we have to turn this moment into a movement.

524

01:37:04.560 --> 01:37:18.210

Richard Krieg: And the movement should not just be to increase the capabilities of health departments, but also towards health equity in the appropriate public health and healthcare rules that you have to follow on that mission.

525

01:37:22.500 --> 01:37:37.500

Monica Schoch-Spana: Thanks so much read sevens that was very, very helpful i'm going to combine your conversation with the close out of our fifth recommendation which i'm going to direct today, but again, these are systems level.

526

01:37:38.370 --> 01:37:52.410

Monica Schoch-Spana: investments and I love the connection rich you made about engaging students engaging Community health workers and sort of thinking ahead to to leadership roles within the health department.

527

01:37:53.610 --> 01:38:01.230

Monica Schoch-Spana: So we know, sadly, that there's been racial disparities and rates of cover 19 infection and deaths.

528

01:38:02.340 --> 01:38:15.750

Monica Schoch-Spana: And we have a renewed awareness about glaring health inequities in the US, but we also have a renewed awareness of the Labor force uniquely suited to help repair both of those things, and today kicked us off originally.

529

01:38:16.350 --> 01:38:29.850

Monica Schoch-Spana: With a focus on the Community health workforce, so the fifth recommendation is about stabilizing the Community health system as the backbone for equity and resilience and rich.

530

01:38:30.330 --> 01:38:51.120

Monica Schoch-Spana: You know that public health has a very strong and lasting relationship with Community health workforce, so this recommendation is about formalizing and sustainably

financing the Community health workforce and granting funds to Community based and faith based organizations directly.

531

01:38:52.200 --> 01:38:53.520

Monica Schoch-Spana: And so today.

532

01:38:55.830 --> 01:39:03.450

Monica Schoch-Spana: I would like you to talk a little bit more about what bearing the strength of the Community health system.

533

01:39:03.870 --> 01:39:23.370

Monica Schoch-Spana: has on the overall well being of low income communities of color mean what is it that sets apart the Community health workforce and the services they provide, I mean, how did they stand, apart from other other portions of the larger health sector over to you today.

534

01:39:30.030 --> 01:39:44.370

Tene Hamilton Franklin: I do agree with what rich so eloquently laid out about the systemic barriers that are in place and the systemic opportunities to overcome those barriers, I think that's important.

535

01:39:45.270 --> 01:39:53.400

Tene Hamilton Franklin: But let me just sent her before I dive deep into my comments, let me just Center as for a moment we're talking about racial disparities with rates of covert.

536

01:39:54.000 --> 01:39:58.740

Tene Hamilton Franklin: But, particularly in the black community and the land next community, we know that these.

537

01:39:59.430 --> 01:40:07.530

Tene Hamilton Franklin: Rates racial disparities amongst all public health and health outcomes have existed for years, and that was clear in the 1985.

538

01:40:07.950 --> 01:40:14.130

Tene Hamilton Franklin: a heckler report conditioned by Margaret heckler who has been head of health and human services for.

539

01:40:14.550 --> 01:40:27.270

Tene Hamilton Franklin: And Federal Government, so this is not anything new, but what the pandemic has done is it has given us an opportunity to change those systems, once and for all to get it right.

540

01:40:27.900 --> 01:40:45.630

Tene Hamilton Franklin: We think about Community health workers, I just want to offer another perspective, particularly from the faith based perspective in the black church for existence, we think about individuals in the Church, that are the ones that are most likely to lean in with health interventions.

541

01:40:46.770 --> 01:40:59.670

Tene Hamilton Franklin: That could be nursing ministries so that's not uncommon across different denominations and particularly with the black church, particularly in in the south.

542

01:41:00.510 --> 01:41:23.220

Tene Hamilton Franklin: And so those individuals are the same individuals that one have trusted relationships in the Community, they have somewhat of a health education background or they are nursing background and they're able to approximate and are able to help execute and help me in with strategies to.

543

01:41:24.390 --> 01:41:38.790

Tene Hamilton Franklin: To help with ours two different health interventions and so that's the type of workforce that we're thinking about so the health system has an opportunity to once and for all validate that expertise.

544

01:41:39.210 --> 01:41:49.800

Tene Hamilton Franklin: And that lived experience as a commodity that's helpful for healthcare and until we do that and it's going to be we're going to.

545

01:41:50.160 --> 01:42:00.750

Tene Hamilton Franklin: sort of stop and start stop and start all over again, and so, if we really want to change the system, so if we really want to address them in equities are going to have to invest.

546

01:42:01.140 --> 01:42:15.450

Tene Hamilton Franklin: And that particular workforce with Community health workers with others that have that level of expertise and approximation to the Community and that have that have the trust, I will say this and closing for this statement.

547

01:42:17.490 --> 01:42:27.810

Tene Hamilton Franklin: Access to health interventions cannot always be done in the clinic and we've seen this with the pandemic in terms of taking the vax vaccination efforts to the communities.

548

01:42:28.950 --> 01:42:41.100

Tene Hamilton Franklin: I first learned of ch w's for Community health workers as part of the medical home to make sure that patients and families at everything that they needed that that physicians and nurses can provide.

549

01:42:41.970 --> 01:42:58.440

Tene Hamilton Franklin: So Community health workers as part of the public health work for us really health workers are integrating into the Community, and they also build on their individual a Community pass it by increasing health knowledge and self sufficiency your range of activities i'll stop there.

550

01:42:59.460 --> 01:43:12.840

Monica Schoch-Spana: Thank you very much, today, I think, to close out a comments by our working group members on the five recommendations i'm going to invite all four of you to consider this scenario.

551

01:43:14.010 --> 01:43:26.670

Monica Schoch-Spana: The four of you have been tapped to advise let's say county leadership or state leadership on how to achieve greater vaccine coverage and underserved populations.

552

01:43:28.470 --> 01:43:35.640

Monica Schoch-Spana: The problem before you is how do you encourage these decision makers who may be thinking in terms of you know, getting.

553

01:43:36.960 --> 01:43:47.250

Monica Schoch-Spana: Vaccines getting people to roll up their sleeves and get vaccinated, how do you encourage them to plan for the long game, because all four of you have been talking about.

554

01:43:47.550 --> 01:43:55.800

Monica Schoch-Spana: Systems level changes that take investment of human and financial capital and political will.

555

01:43:56.670 --> 01:44:04.710

Monica Schoch-Spana: So what arguments, would you use in advising county or state leadership to take the long game perspective.

556

01:44:05.100 --> 01:44:22.050

Monica Schoch-Spana: You know what evidence, would you deploy what steps would you recommend first you know what would you tell them to set aside in their budgets, not only in the coming fiscal year but for ongoing investments and i'll just open the floor.

557

01:44:23.100 --> 01:44:25.860

Monica Schoch-Spana: up for any of you to kick off.

558

01:44:29.760 --> 01:44:30.450

Richard Krieg: Go ahead.

559

01:44:31.020 --> 01:44:39.270

Tene Hamilton Franklin: i'll just i'll jump in and i'll make a quick and so we've talked about how we need investment in.

560

01:44:40.050 --> 01:44:51.120

Tene Hamilton Franklin: In our communities and with regards to a disparities in communities of color Community health workers, that is a strategy, and in order for to do that.

561

01:44:51.690 --> 01:44:58.440

Tene Hamilton Franklin: Community health workers have to be compensated with the living wage is not enough just to write them into a grant temporarily.

562

01:44:59.010 --> 01:45:09.210

Tene Hamilton Franklin: There has to be Community career development for Community health workers and then Lastly, there also needs to be an evaluation component on the effectiveness of of Community health workers.

563

01:45:09.750 --> 01:45:17.010

Tene Hamilton Franklin: That is Those are the three things that I would I would start with start the conversation off with with our.

564

01:45:17.730 --> 01:45:32.760

Tene Hamilton Franklin: mayor or elected officials in terms of a long term strategy to help mitigate that only vaccination disparities with regards to hold it and other vaccinations, but also with regards to addressing the inequities that we have.

565

01:45:35.520 --> 01:45:42.990

Richard Krieg: yeah That was my very same thought was the budgeting process because lots of local health departments.

566

01:45:44.250 --> 01:45:52.080

Richard Krieg: Were decimated someone from having had the lower budgets, I known that the county health department in Toledo Ohio, for example.

567

01:45:52.890 --> 01:46:02.340

Richard Krieg: They had one worker who's environmental health worker who was in charge of version control influence and so on, and she had to staff with what we're doing.

568

01:46:03.150 --> 01:46:10.950

Richard Krieg: Disease prevention, who are content to start working on the vaccine program and they all got cove and 19 it was a mess.

569

01:46:11.430 --> 01:46:18.540

Richard Krieg: So I think it's a moment when local health department directors and I think this applies to the state level as well, have people's attention.

570

01:46:19.020 --> 01:46:30.030

Richard Krieg: And need to build into their budget and ability to bounce off this pandemic and have the requisite staff, the first place, to look is is where to go for their budget every year.

571

01:46:30.540 --> 01:46:35.250

Richard Krieg: But beyond that they have to put to the side, the time to understand that this is the moment.

572

01:46:35.820 --> 01:46:45.570

Richard Krieg: that perhaps the field can get off its roller coaster boom or bust funding type of thing and zeke it came in each one and one came and budgets went up, then they went down.

573

01:46:46.080 --> 01:46:58.140

Richard Krieg: And just just think you know that when a local health department director if there's a emergency at the local level that health department directly becomes the incident commander of all of the other.

574

01:46:58.980 --> 01:47:09.780

Richard Krieg: Parts of the local government and imagine if the fire police chief mentioned the fire department had no fires among year and they cut the budget 30% because of that.

575

01:47:10.890 --> 01:47:15.450

Richard Krieg: And so what's what's happening, a public health, so I think there's a long term.

576

01:47:15.870 --> 01:47:23.160

Richard Krieg: advocacy for more budgets and make very good cases for that and, and I think that's the time to do it and, secondly, to.

577

01:47:23.520 --> 01:47:33.330

Richard Krieg: say the time for the site to work within associations and other networks that helped directors have to advocate for more funding and to put that in.

578

01:47:33.570 --> 01:47:41.010

Richard Krieg: to people who can can work, the Community work in the Community work in the department, on behalf of the Community that that's where those months ago.

579

01:47:41.910 --> 01:47:50.970

Walter Orenstein: I agree completely of those comments I think we're focused on the local, but this is a national problem.

580

01:47:51.540 --> 01:48:10.410

Walter Orenstein: This is again a community that is not well vaccinating not only has that Community risk puts other communities to risk as a reservoir for transmitting infection and I think one of the things that would be very important, is from the local level to talk with your congressperson.

581

01:48:11.670 --> 01:48:26.880

Walter Orenstein: years at the state level of Senator to try and get federal support for this and I completely agree with Richard indeed for long term maintenance of that support and not an up and down kind.

582

01:48:27.270 --> 01:48:46.380

Walter Orenstein: of effort and that's why I think trying to add on other issues, such as an adult immunization program or other kinds of things could be helpful and then again building an infrastructure to deal with emergencies that we don't have very well in most areas right now.

583

01:48:47.970 --> 01:48:59.010

Arrietta Chakos: I agree with all the comments that people have made and we're working on a pilot project with our San Diego community that site to mobilize.

584

01:48:59.700 --> 01:49:10.440

Arrietta Chakos: funding and the funding strategy to support salaries for comatose Community health workers, but also to sensitize.

585

01:49:11.280 --> 01:49:18.210

Arrietta Chakos: Local state and federal elected to the issues at hand, and so, when we look at the budgets.

586

01:49:18.750 --> 01:49:34.920

Arrietta Chakos: Of all of our local communities, public health, gets maybe a 10th of what law enforcement guess and that's mirrored at the federal level CDC gets maybe 1,000th of what Defense department get so we have to reprogram our.

587

01:49:36.000 --> 01:49:46.200

Arrietta Chakos: funding allocations and it can be done with this great boost from our federal funding right now and then figure out how we build sustainable.

588

01:49:47.250 --> 01:49:54.930

Arrietta Chakos: Financial lives for health equity and health and all policies and it's honestly it's a possibility and within our reach right now.

589

01:49:57.420 --> 01:50:09.150

Monica Schoch-Spana: Thank you so much areata rich Walt and today for those comments we're going to encourage all of you to type in your questions in the chat box.

590

01:50:10.050 --> 01:50:17.250

Monica Schoch-Spana: And i'm going to turn this over to Emily who's going to facilitate questions from from our participants.

591

01:50:17.760 --> 01:50:31.890

Monica Schoch-Spana: It would be great to have some conversations between the local teams and the national working group so local teams you guys go ahead and and ask your questions as well, so Emily back over to you.

592

01:50:32.490 --> 01:50:39.840

Emily Brunson: Thank you, Monica and and Liz and Stephen I think that this set of questions will resonate with with you in particular.

593

01:50:40.470 --> 01:50:53.940

Emily Brunson: This question about funding has come up twice, once from an anonymous anonymous participant, and the other from Mary I metaphor thinking about funding university systems, the Federal Government.

594

01:50:55.080 --> 01:51:04.530

Emily Brunson: Local Government public health departments and definitely communities all work on different timelines funding needs are not connected well.

595

01:51:05.250 --> 01:51:17.550

Emily Brunson: But it comes down to the point of you know, when thinking about all of this and funding and making the argument that what we're doing is important and it's important to continue, or that it is working.

596

01:51:18.300 --> 01:51:27.690

Emily Brunson: What are some short term metrics that can be used to evaluate that especially and in relation to Community health care workers.

597

01:51:28.080 --> 01:51:36.270

Emily Brunson: there's been a lot of evaluation around the effectiveness of Community health workers but at what point should we stop highlighting the need to evaluate.

598

01:51:36.720 --> 01:51:46.890

Emily Brunson: And then acknowledge the effectiveness of this workforce so So what can we do in terms of proving that things work in, especially in a Community driven scenario.

599

01:51:48.000 --> 01:51:57.780

Richard Krieg: I think marshaling metrics that do exist and it's pretty compelling is one step, I do think, though, that, especially at the local level.

600

01:51:59.550 --> 01:52:10.830

Richard Krieg: You know, in a budget process oftentimes it's one picture, or one graph or one one or two numbers that's that swing that the argument I really think it's kind of relating.

601

01:52:11.400 --> 01:52:23.010

Richard Krieg: The situation of the pandemic to decision makers and laying out for those people how a Community workers i'll use the word force extender it just so happens that.

602

01:52:24.600 --> 01:52:28.890

Richard Krieg: You know if you if you imagine the roles that Community health workers have.

603

01:52:29.580 --> 01:52:38.070

Richard Krieg: They can double task they can serve multiple functions, you know, there may not be a translator in the apartment with someone who's working in the field, on behalf of the.

604

01:52:38.430 --> 01:52:43.350

Richard Krieg: Of the health departments in the health work and can play that role of being a translator and.

605

01:52:43.920 --> 01:52:56.970

Richard Krieg: and politicians like getting to their their main or they can use these as well as majority of the Communities, so I think that there's a bonafide case that can be made and it's just it's just at the level of common sense, then.

606

01:52:57.870 --> 01:53:04.230

Richard Krieg: And there has to be a career ladder also for Community health workers and I love the thought that they will go back to school and.

607

01:53:04.560 --> 01:53:11.640

Richard Krieg: upgrade their credentials as well, and I think there's a pretty powerful case that could make the made that when you look at your staff compliment.

608

01:53:12.570 --> 01:53:24.570

Richard Krieg: That by hiring Community health workers, even on an exploratory basis if you're going to set up the ability to garner metrics but also to marshal the evidence that exists, we make that pitch.

609

01:53:26.970 --> 01:53:35.400

Tene Hamilton Franklin: I also want it to take a moment to respond and I do agree with everything that you said, Richard i'm here in Tennessee and we've been in the media lately.

610

01:53:36.330 --> 01:53:43.320

Tene Hamilton Franklin: And I will say and I in my previous position, I was director of the office of minority health Tennessee Department of Health.

611

01:53:43.860 --> 01:53:56.820

Tene Hamilton Franklin: But had an opportunity to really have a perspective of what our legislators needed to be convinced that public health was worth worth investment in general right.

612

01:53:57.330 --> 01:54:07.290

Tene Hamilton Franklin: And so, at the end of the day, it really is about the bottom line for some individuals, and so I think that there might be an opportunity to incorporate.

613

01:54:07.650 --> 01:54:17.880

Tene Hamilton Franklin: and healthy economists, as part of this solution with regards to evaluating the effectiveness or the bottom line and and how that could save the state.

614

01:54:18.330 --> 01:54:29.430

Tene Hamilton Franklin: and healthcare dollars overall if we if we did have a Community health workers work for us if we did invest in public health over off so.

615

01:54:30.180 --> 01:54:43.890

Tene Hamilton Franklin: I think it was I forgot, who was Elizabeth it might have been you and that mentioned that there was an effort to also engage elected officials and educate them about public health.

616

01:54:44.700 --> 01:54:57.390

Tene Hamilton Franklin: So it is that I think we also have to frame it in a way that legislators, understand and from my experience here in Tennessee it helps to really target that bottom line.

617

01:54:58.410 --> 01:55:01.320

Tene Hamilton Franklin: And with regards to cost savings that we could possibly have.

618

01:55:03.360 --> 01:55:08.430

Stephen Thomas: You know i'm wondering if we when we do the right thing if it costs more.

619

01:55:09.840 --> 01:55:30.510

Stephen Thomas: Maybe if your argument is also a moral one, and not just cost savings and then though the cost saving sighs Tina i'm saying F, the vaccines are effective in preventing death and serious illness right, what is the cost of one case in an icu.

620

01:55:31.650 --> 01:55:41.790

Stephen Thomas: it's unknowable number, if you take a look at it we're talking hundreds of thousands of dollars, so why aren't we saying that every time we give a vaccine in the Community at the local level.

621

01:55:42.930 --> 01:56:03.750

Stephen Thomas: That that is X number of dollars saved why doesn't that argument work as well, especially in the moment of covert because now we know by averting people ending up in the hospital we're saving hundreds of thousands of dollars why can't public health get credit for that.

622

01:56:04.920 --> 01:56:23.520

Stephen Thomas: that's what I don't get about how we do our arguments, the other is there's a lot of guilt out there we've met young people who did not get vaccinated got sick defective grandma grandma dies, they are guilty, we need a way for them to.

623

01:56:24.750 --> 01:56:40.620

Stephen Thomas: kind of deal with that and that story in and of itself, combined with these other things, I think, can help move the needle with these legislators, these are their constituents and then last but not least, since I saw your story in Tennessee last night.

624

01:56:41.760 --> 01:56:47.880

Stephen Thomas: about all those elected officials who had been vaccinated and refuse to tell their constituents.

625

01:56:49.080 --> 01:56:52.890

Stephen Thomas: Why don't we tell their constituents they've been fascinated.

626

01:56:54.330 --> 01:57:03.870

Stephen Thomas: And then we can say follow your leaders, we have to be more creative because the other side is actively involved.

627

01:57:04.800 --> 01:57:22.140

Stephen Thomas: In very sophisticated strategies and I don't think we're quite equal to it, yet, sometimes we don't even want to talk about it doesn't mean we have to go down the rabbit hole but to ignore it is to ignore very powerful forces targeting a very communities we're talking about.

628

01:57:24.060 --> 01:57:27.270

Richard Krieg: Top seeded you said a lot there.

629

01:57:27.330 --> 01:57:27.720

and

630

01:57:28.830 --> 01:57:38.700

Richard Krieg: Just on the first comments the moral aspects of the stair many in they are real and I think that.

631

01:57:39.990 --> 01:57:54.780

Richard Krieg: That information is available in terms of the preventive approaches and using both healthcare and in public health and what the outcomes are, if you don't do those things, and what they cross the Community and also what Walter said in terms of.

632

01:57:55.980 --> 01:58:06.750

Richard Krieg: viruses, being a net not discriminating in terms of who they will affect in the Community so it's in everyone's interest but I wanna I want to jump from that to kind of the worst case scenario.

633

01:58:07.530 --> 01:58:14.010

Richard Krieg: Because he said, be creative and and and so on, and that is where you have a local health department.

634

01:58:14.430 --> 01:58:27.780

Richard Krieg: In the Community I won't say what part of the country, or where their workers they're all over, but where the the staff does not reflect the Community where the expertise and Community skills is is.

635

01:58:28.890 --> 01:58:39.240

Richard Krieg: is not there any favorite person and say that, then I think it really is a call for Community action which is hard in instances i've always been amazed, with a.

636

01:58:39.570 --> 01:58:47.700

Richard Krieg: Large hospital shuts down that one's out on the street protesting people don't feel empowered with miss area, particularly on the heels of covert.

637

01:58:48.060 --> 01:58:58.170

Richard Krieg: It gets down to communities organizing and having a basis to really make their voice heard tough thing, but there are ways to do it.

638

01:58:58.500 --> 01:59:06.750

Richard Krieg: And I think in those communities where it's at ground zero it's incumbent on anybody who has access to that community in any way, shape or form.

639

01:59:07.170 --> 01:59:18.180

Richard Krieg: to arm them, I always like the thought of the force field analysis that you watch the Community who's for doing what's right who's against it had the neutralizes against it, have you.

640

01:59:18.540 --> 01:59:27.540

Richard Krieg: Have you bulk up the parts of the Community that can take action politicians or use our know when that happens, and when the Community.

641

01:59:28.230 --> 01:59:38.280

Richard Krieg: Does that there's got to be some response, at least, it will shake things up, so I think in the worst case, you have to use all the strategies, you spoke to and more but.

642

01:59:38.910 --> 01:59:51.780

Richard Krieg: that's a case where you can wait around for 20 years and there may not even if they're spending their it may not be applied to the things that that health department needs to do if it's going to function as a health department to improve Community health.

643

01:59:53.730 --> 01:59:54.210

Emily Brunson: Thank you.

644

01:59:54.960 --> 02:00:05.820

Walter Orenstein: For that i'm just going to say that, having been at the national level formal cost benefit analysis economic analysis very, very helpful.

645

02:00:06.210 --> 02:00:19.050

Walter Orenstein: I think would be important to invest in that, so I would like to agree with what I said in terms of doing that I think the other issue, and I think Steven mentioned, is the issue.

646

02:00:20.280 --> 02:00:34.500

Walter Orenstein: My boss at CDC is to say anak data will always be real data, the issue is to get attic data that illustrate real data and to try and get some of these stories and put them in perspective, so that it can motivate people.

647

02:00:35.670 --> 02:00:40.290

Emily Brunson: So we're all the time, but Liz and no way your comments.

648

02:00:41.790 --> 02:00:56.430

Elizabeth Cartwright: um i've worked with Community health workers now for almost 30 years 10 years down on the US Mexico border, and I would really like to emphasize, something that Richard said that, and I think it was reflected on something that I said a little bit earlier that.

649

02:00:57.600 --> 02:01:09.870

Elizabeth Cartwright: The Community health worker cannot be seen as a band aid to fix everything they will be the lowest paid person on the totem Pole, they will have no job security.

650

02:01:10.920 --> 02:01:26.730

Elizabeth Cartwright: I have seen people in these roles over the years, not advance the way that you can make it work is to have an embedded within a university setting actually how this my university, it means refining but.

651

02:01:27.750 --> 02:01:39.030

Elizabeth Cartwright: It and it needs to be a ladder and intellectual ladder to a more professional level and a bsn or to be a mid level practitioner or to go on to be a doctor or.

652

02:01:39.570 --> 02:01:44.700

Elizabeth Cartwright: You know any other level of health care, professional and that is how you change like Richard said.

653

02:01:45.090 --> 02:01:57.510

Elizabeth Cartwright: What the public health department looks like that's how you change how all these things look like is by getting more and more people into that professional level of economic and intellectual functioning.

654

02:01:58.260 --> 02:01:58.620

Emily Brunson: Thank you.

655

02:02:00.930 --> 02:02:02.760

Emily Brunson: So snowy and then Daniela.

656

02:02:03.270 --> 02:02:08.820

Noe Crespo: Briefly, if I can add to the conversation of the huge value added by Community health workers.

657

02:02:09.780 --> 02:02:23.880

Noe Crespo: Often the label that's used to describe communities is hard to reach and oftentimes my responses hard to reach for whom, and that is that the Community health worker is is really the the the the workforce that is able to reach.

658

02:02:24.630 --> 02:02:31.260

Noe Crespo: invigorates and and create action that otherwise does not happen, so I think that that's an important consideration.

659

02:02:33.900 --> 02:02:36.930

Emily Brunson: So Daniela we're at time, but if you want to just add your.

660

02:02:37.950 --> 02:02:41.700

Daniela Rodriguez | JHSPH: No, I didn't have a comment on them to agree with everything that's been said here, thank you.

661

02:02:42.000 --> 02:02:47.190

Emily Brunson: So Monica and thank you all i'll turn this over to Monica to close us out.

662

02:02:48.900 --> 02:02:59.460

Monica Schoch-Spana: Thanks to our panelists both from the first half in the second half, and thanks to all of you for joining us just to be quick the country.

663

02:03:00.060 --> 02:03:08.940

Monica Schoch-Spana: needs to seize this moment to achieve widespread and lasting coven 19 vaccine coverage, including among the most vulnerable groups.

664

02:03:09.540 --> 02:03:29.100

Monica Schoch-Spana: But we can also be developing locally appropriate mechanisms that advance equity and health along the way, so let's act in ways that are both urgent and essential and all of us at the Community X coalition wish you well, and thank you for your participation take care.

665

02:03:33.150 --> 02:03:34.140

Stephen Thomas: Where your man.
